Presentación	ii
Cruzamientos de Arroz realizados en Argentina - Instituto Nacional de Tecnología Agropecuaria (INTA), 1984 - 1991	1
Cruzamientos de Arroz realizados en Brasil	
- Centro Nacional de Pesquisa de Arroz e Feijao (CNPAF) del sistema de la Empresa Brasileira de Pesquisa Agropecuaria, 1977 - 1990	9
- Estado de Rio Grande do Sul, 1972 - 1989	
- Centro de Pesquisa Agropecuaria de Terras Baixas de Clima Temperado (CPATB) del sistema de la Empresa Brasileira de Pesquisa Agropecuaria e Instituto Riograndense do Arroz (IRGA)	107
- Estado de Sao Paulo - Instituto Agronomico de Campinas (IAC), 1969 - 1989	163
Cruzamientos de Arroz realizados en Colombia	
- Instituto Colombiano Agropecuario (ICA), 1960 - 1991	187
Cruzamientos de Arroz realizados en Chile	
- Instituto Nacional de Investigaciones Agropecuarias (INIA), 1985 - 1991	243
Cruzamientos de Arroz realizados en México	
- Instituto Nacional de Investigaciones Forestales y Agropecuarias (INIFAP), 1967 - 1990	261
Cruzamientos de Arroz realizados en Perú	
- Instituto Nacional de Investigaciones Agropecuarias y Agroindustriales (INIAA), Chiclayo, 1966 - 1990	345
Cruzamientos de Arroz realizados en República Dominicana	
- Centro de Investigaciones Arroceras (CEDIA), 1964 - 1991	387

Anexos

Anexo 1. Listado de variedades relevantes para el mejoramiento del Arroz en América Latina	413
Anexo 2. Cruzamientos del Centro Internacional de Agricultura Tropical (CIAT) relevantes para el estudio de los cruzamientos de EMBRAPA, Brasil, y de ICA, Colombia	420

Presentación

El nivel de sofisticación del intercambio de germoplasma de arroz en América Latina ha aumentado considerablemente durante los últimos 20 años. A principios de la década de los 70 se consolidó el proceso de diseminación de las variedades semi-enanas de arroz, lográndose identificar dentro de poblaciones introducidas, materiales aptos para uso comercial a nivel local. El interés general era obtener rápidamente los beneficios derivados del potencial de rendimiento asociado con el nuevo tipo de planta, por lo tanto se hizo énfasis en materiales con amplia adaptación. Con el tiempo se identificaron e incorporaron resistencias a limitantes bióticas con capacidad para mejorar la adaptación del germoplasma a través del tiempo. Estas limitantes se relacionaban mayormente con aquellas enfermedades capaces de reducir drásticamente la producción en algunos años y/o regiones específicas. Como resultado de este trabajo, El intercambio de germoplasma amplió su área de acción para destacar materiales que mostraran además de potencial agronómico, resistencia a limitantes de interés regional. Sin embargo, el objetivo continuaba siendo la identificación dentro de poblaciones introducidas de materiales aptos para uso directo por los agricultores. Los éxitos logrados con el intercambio de germoplasma han sido significativos, pudiéndose asociar muchos de ellos a la capacidad del sistema para adaptarse a las nuevas necesidades del sector arrocero.

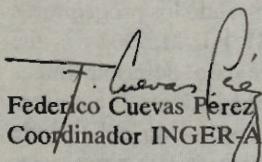

Este catálogo es una respuesta al nuevo énfasis del mejoramiento genético del arroz en las regiones más productoras del cereal en América Latina. Existen 13 países con programas de mejoramiento en nuestra región, la mayoría de los cuales están demandando genes para aumentar sus probabilidades de desarrollar variedades para resolver sus problemas específicos. El interés de estos científicos no es la introducción de materiales para uso directo, pues el nivel de productividad y la combinación de características varietales alcanzados hacen muy difícil que esto se logre. Por tanto, además de conocer el comportamiento de los materiales bajo las diferentes condiciones, los fitomejoradores requieren información sobre el potencial de una línea como progenitor. Para ello se necesitaría conocer el origen de los genes que porta un material en particular y la capacidad que éste tiene para donar esos genes a su descendencia. Este catálogo trata de contribuir a la solución del primer punto al ofrecer información detallada sobre los cruzamientos realizados en los diferentes países de la región, facilitando la construcción de árboles genealógicos de los materiales generados por los diferentes programas. Se están incluyendo cruzamientos realizados en Argentina, Brasil, Colombia, Chile, México, Perú y República Dominicana.

El cruzamiento triple es aquel entre las F_1 de un cruzamiento simple y un progenitor individual; el doble describe la combinación de dos F_1 de cruces simples, y la denominación de múltiple se utiliza para aquellos casos en que la F_1 de un cruzamiento diferente a simple se usa como progenitor. Si el cruzamiento múltiple se hace con un parente recurrente, se designa como retrocruzamiento. Al utilizar los códigos de los cruzamientos, el uso de números y asteriscos para definir los retrocruzamientos se eliminó, con excepción de aquellos materiales descritos según sus progenitores y retrocruzamientos sin codificación.

Para homogenizar la descripción de los progenitores se dio preferencia al nombre comercial de las variedades utilizadas en cruzamientos. Por lo tanto en los casos en que algunos programas describían las variedades por su pedigree, este se sustituyó por el nombre comercial. Para facilitar el estudio de la base genética de los cruzamientos, se incluye la descripción de la mayoría de las variedades utilizadas en los programas de mejoramiento de la región.

Se observó que los programas del Centro Internacional de Agricultura Tropical (CIAT), el Instituto Colombiano Agropecuario (ICA) de Colombia y el Centro Nacional de Pesquisa de Arroz e Feijao (CNPAF) de Brasil intercambiaron algunos cruzamientos, generándose diferentes códigos para los mismos cruzamientos. En estos casos se indicaron los códigos equivalentes y se incluyó un anexo con la descripción de los cruzamientos CIAT relevantes para describir los progenitores utilizados.

Queremos agradecer nuevamente la generosidad de los programas que comparten sus cruzamientos a través de este catálogo, fortaleciendo el mecanismo de intercambio de germoplasma dentro de la Red Internacional para la Evaluación Genética del Arroz (INGER). Nos resulta muy difícil hacer justicia al intentar destacar la participación del equipo de trabajo del INGER - América Latina en la realización de este trabajo. Todos pusieron su dosis de entusiasmo y dedicación. Sería imperdonable si no destacara la dedicación de Claudia Zúñiga a la realización de este sueño de nuestra red arrocera Latinoamericana.

Federico Cuevas Pérez
Coordinador INGER - América Latina

Las instituciones que generosamente han acordado compartir sus cruzamientos son:

- Instituto Nacional de Tecnología Agropecuaria (INTA), Argentina
- Centro Nacional de Pesquisa de Arroz e Feijao (CNPAF), Brasil
- Centro de Pesquisa Agropecuaria de Terras Baixas de Clima Temperado (CPTAB), Brasil
- Instituto Riograndense do Arroz (IRGA), Brasil
- Instituto Agronomico de Campinas (IAC), Brasil
- Instituto Nacional de Investigaciones Agropecuarias (INIA), Chile
- Instituto Colombiano Agropecuario (ICA), Colombia
- Instituto Nacional de Investigaciones Forestales y Agropecuarias (INIFAP), México
- Instituto Nacional de Investigaciones Agropecuarias y Agroindustriales (INIAA), Perú
- Centro de Investigaciones Arroceras (CEDIA), República Dominicana

El sistema utilizado para describir los cruzamientos trata en lo posible de describir el proceso seguido en su realización. Así, el cruzamiento simple del progenitor A con B se describe A/B, usualmente designado con un código. Los códigos varían de acuerdo con el programa de mejoramiento; por ejemplo, el programa nacional de Perú utiliza el código PNA seguido de un número para cada cruzamiento. Si el código de A/B es PNA 05 y se realiza un cruzamiento triple con el progenitor C, nuestro sistema describiría este cruzamiento como PNA 05/C considerando que un cruzamiento triple siempre está precedido de uno simple. El mismo sistema se utilizó para describir retrocruzamientos, pues en estos casos la única diferencia es que el progenitor C es igual a A ó B. En los casos en que el cruzamiento simple carecía de código, éste se describió tal cual, a saber A/B. Para cruzamientos más complejos, se utilizaron rayas oblicuas (/) para describir el orden de los cruzamientos, así // significa el segundo cruzamiento, /// el tercero y así sucesivamente. El sistema y los cruzamientos utilizados redujeron significativamente el uso de las rayas oblicuas en este catálogo.

Debido a que en ocasiones, algunos materiales se describen usando los progenitores utilizados para desarrollarlos, por ejemplo Century Patna 231/P.I. 215936, y a que algunos programas utilizan sólo el código del cruzamiento para describir líneas avanzadas utilizadas como progenitores, el orden y el tipo de cruzamiento son a veces difíciles de interpretar. Por ello este catálogo incluye una descripción del tipo de cruzamiento: simples (S), triples (T), dobles (D), retrocruzamientos (R) y múltiples (M).

Cruzamientos de arroz realizados en Argentina

Número 4 ciclo de cultivo de los cruzamientos realizados en la Estación

Experimental Agropecuaria Corrientes, INTA, Argentina.

-Tipo de Cruz-

Instituto Nacional de Tecnología Agropecuaria (INTA),
Estación Experimental Agropecuaria de Corrientes (EEA),
1984-1991.

Cruzamientos de arroz realizados en Colombia

Primeros 5 años de cruzamiento realizado en ICA-Nataima
(1960-1966) y en ICA-Palmira (1984-1991). Créditos: I

Primeros 5 años de cruzamiento realizado en ICA-Nataima

ICA-Palmira

Instituto Colombiano Agropecuario (ICA).

- Centro Regional de Investigación, Nataima, Tolima, 1960-1966.
- Centro Regional de Investigación, Palmira, Valle, 1984-1991.

Cruzamientos de semillas
realizados en Colombia

Número y tipo de cruzamientos realizados en ICA-Nataima (1960-1966) y en ICA-Palmira, (1984-1991), Colombia.¹

Cruzamientos de arroz realizados en México

585

Diseño a cargo de conservación de las líneas por INIFAP. Fotografía:
Explotación Agrícola del Valle de Culiacán, Sinaloa. A
Red de Cereales de Grano Pequeño Zona Sur, Morelos, México.

Instituto Nacional de Investigaciones Forestales y
Agropecuarias (INIFAP).

- Estación Experimental Agrícola del Valle de Culiacán,
Sinaloa, 1967-1990.
- Red de Cereales de Grano Pequeño Zona Sur, Morelos,
1969-1990.

Cruzamientos de cultivos
Lesiones en México

Número y tipo de cruzamientos realizados por INIFAP, Estación Experimental Agrícola del Valle de Culiacán, Sinaloa, y Red de Cereales de Grano Pequeño Zona Sur, Morelos, México.

Cruzamientos de arroz realizados en Perú

Areas Arroceras del Perú

* Tomado de Hernández L. J., 1977. "El Cultivo del Arroz en el Perú y las Contribuciones de la Investigación al Mejoramiento de su Producción". Mimeógrafo.

Instituto Nacional de Investigaciones Agropecuarias y
Agroindustriales (INIAA).

- Estación Experimental de Vista Florida, Chiclayo,
1966-1990.

Número y tipo de cruzamientos realizados en la Estación Experimental de Vista Florida, INIAA, Perú.
