The International Center for Tropical Agriculture (CIAT, its Spanish acronym) is dedicated to the alleviation of hunger and poverty in developing countries of the tropics by applying science to agriculture to increase production while sustaining the natural resource base.

CIAT is one of 17 international agricultural research centers sponsored by the Consultative Group on International Agricultural Research (CGIAR).

The core budget of CIAT is financed by more than 20 donor countries, international and regional development organizations, and private foundations. In 1992, CIAT donors included the governments of Australia, Belgium, Canada, China, Finland, France, Germany, Italy, Japan, Mexico, Netherlands, Norway, Spain, Sweden, Switzerland, United Kingdom, and United States. CIAT donor organizations included the European Economic Community (EEC), the Ford Foundation, the Inter-American Development Bank (IDB), the International Development Research Centre (IDRC), the United Nations Development Programme (UNDP), and the World Bank.

Information and conclusions reported here do not necessarily reflect positions of any donor agencies.

## Introducción

El objetivo primordial de la Unidad de Recursos Genéticos del CIAT incluye la adquisición, conservación y caracterización de los recursos de germoplasma de frijoles *Phaseolus*, de yuca del género *Manihot*, y varios géneros de pasturas tropicales. Así mismo, llevar a cabo la investigación necesaria en dichas colecciones, para que el germoplasma pueda ser utilizado más eficientemente por organizaciones internacionales y programas nacionales.

A 1991, la colección de germoplasma de frijoles del género *Phaseolus* abarca un total de 26,506 accesiones incrementadas y disponibles para distribución. La especie *Phaseolus vulgaris* y sus silvestres ancestrales constituyen el mayor componente de esta colección (89.5%), seguido por las especies *Phaseolus lunatus* (5.5%), *Phaseolus coccineus* (2.3%), *Phaseolus polyanthus* (1.1%) y *Phaseolus acutifolius* (1.0%). Las especies silvestres no ancestrales incluyen 22 especies pero aportan solo el 0.6% del total de la colección (ver Tabla 1).

Este catálogo de la colección del germoplasma de frijol común, *Phaseolus vulgaris* corresponde a una actualización del primer catálogo publicado en 1984. Desde esa versión la colección se ha incrementado en más de 7,000 accesiones. En 1977, CIAT aceptó la responsabilidad para preservar y manejar la colección mundial del germoplasma de las especies cultivadas de *Phaseolus*. Esencialmente, CIAT adquiere, conserva, caracteriza, evalúa y hace el germoplasma disponible a los investigadores de frijol.

En esta edición se describen cerca de 23,700 accesiones de la especie *Phaseolus vulgaris*, tanto de las formas cultivadas como de las silvestres, y se incluyen las siguientes secciones:

1. Breve descripción de las frecuencias, hasta 1991, del germoplasma de acuerdo a especies, origen geográfico, tipo de semilla, y hábito de crecimiento.
2. Definición de descriptores. Se incluyen solo datos pasaporte básicos, así como tipo de semilla y hábito de crecimiento. Información adicional puede ser suministrada mediante solicitud.
3. Lista de números "G" ordenada en forma secuencial, incluyendo los descriptores.
4. Lista de números "G" ordenada en forma alfabética por "IDENTIFICACION", para búsqueda rápida de números "G" teniendo la identificación del material.
5. Lista de números "G" ordenada en forma alfabética por "REGLOCAL", Registro Local para búsqueda rápida de números "G", si se tiene este descriptor.

Grupos especiales del catálogo, por ejemplo por país, por tipo de semilla, o por hábito de crecimiento, pueden ser suministrados en diskettes, usando DBASE III Software. Pedidos de germoplasma (cantidades pequeñas), y/o información pueden ser dirigidos a:

Total			26,506

## Origen geografico del germoplasma de *P. vulgaris* (Nov./91)

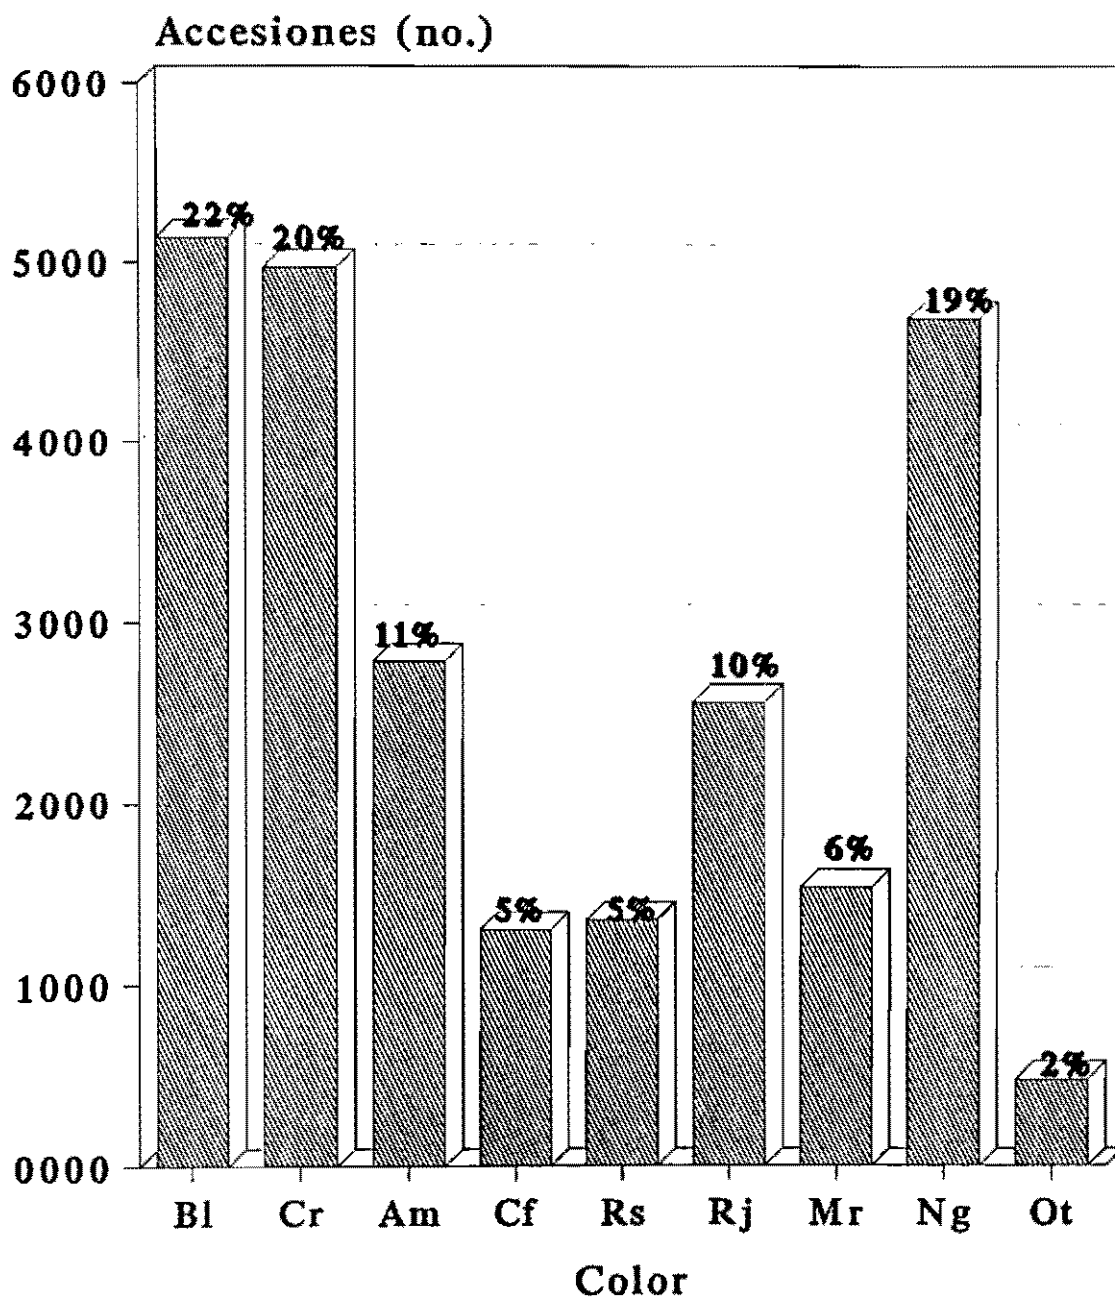

NA: Norteamérica  
CA: Centroamérica  
Cb: Caribe

AS: Suramérica  
NS: Suramérica no-Andina  
Eu: Europa

AF: Africa  
AO: Asia-Oceanía  
MO: Medio Oriente  
SO: Origen desconocido

## Frecuencias de colores de semilla en el germoplasma de *P. vulgaris* (Nov./91)

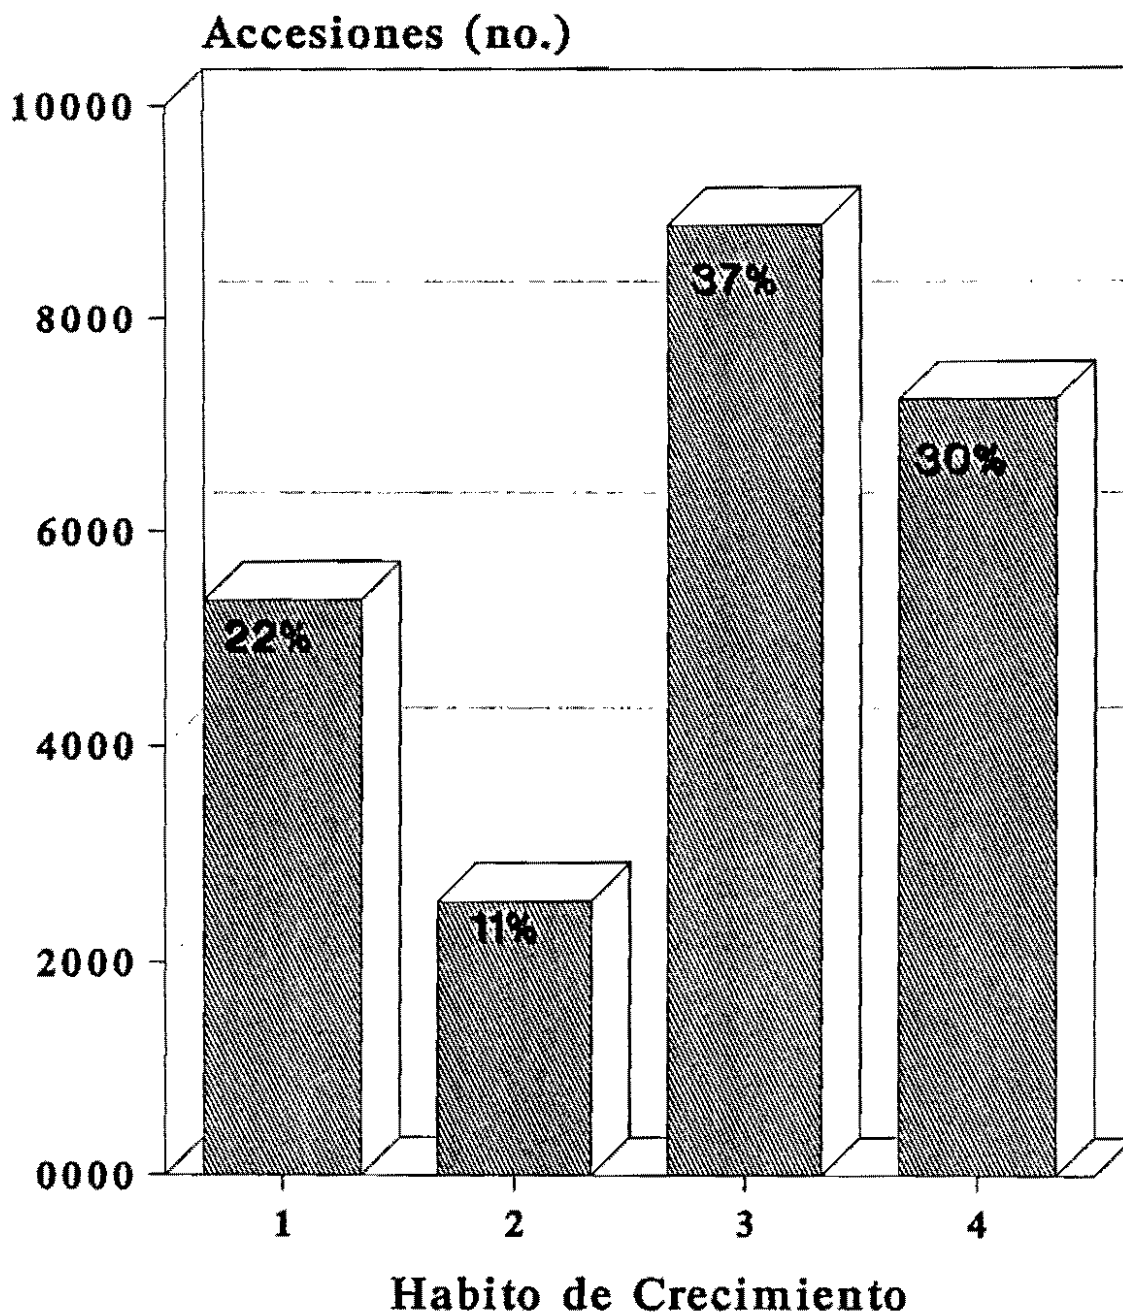

Bl: Blanco  
Cr: Crema  
Am: Amarillo

Cf: Café  
Rs: Rosado  
Rj: Rojo

Mr: Morado  
Ng: Negro  
Ot: Otros

## Frecuencia de hábitos de crecimiento en el germoplasma de *P. vulgaris* (Nov./91)

1: Arbustivo determinado  
2: Arbustivo indeterminado

3: Postrado indeterminado  
4: Trepador indeterminado

**2a. Sección:** Definición de descriptores. Incluye datos pasaporte básicos, así como tipo de semilla y hábito de crecimiento.

## **DESCRIPTORES**

### **1. NO.CIAT = Número CIAT**

Número CIAT, o número de germoplasma, es el número asignado a la accesión original en el banco de germoplasma de la Unidad de Recursos Genéticos del CIAT, cuando la semilla ha sido incrementada. Este número consta de la letra "G" seguida de cinco dígitos. En algunos casos hay una letra después de los dígitos (A,B,C, etc.); esta letra corresponde a separaciones justificadas de la accesión original.

### **2. IDENTIFICACION = Identificación**

Es el nombre local o varietal de la accesión o el número de registro del donante de la semilla. Este nombre se registra tal como se recibe de la fuente donadora y sólo se hacen correcciones en nombres de materiales muy conocidos.

### **3. REGLOCAL = Registro Local**

Corresponde al registro de la accesión usado por el país, el investigador o el colector donante. Este registro puede ser numérico o alfabético-numérico. En algunos casos puede reemplazar a la identificación, cuando esta no existe o se desconoce.

### **4. ORIG = Origen**

Básicamente, es el país donde el material fue colectado. Sin embargo, si el material fue obtenido a través de donación de un banco nacional, se lleva a cabo una búsqueda para indagar, hasta donde sea posible, los antecedentes del material; la última fuente conocida es registrada como origen. Cuando no es posible encontrar la información, el "ORI" (origen) se deja en blanco. Los códigos son los mismos usados para "PROC" (procedencia).

### **5. PROC = Procedencia**

Es el país donante de la semilla a CIAT. Los siguientes códigos son los usados para los países.

AFG = Afganistan	EGT = Egipto	NLD = Holanda
AGA = Argelia	ELS = El Salvador	NPL = Nepal
AGL = Angola	ETP = Etiopía	NWY = Noruega
ARA = Arabia	FRC = Francia	NZL = Nueva Zelandia
ARG = Argentina	GAM = Gambia	PER = Perú
ATL = Australia	GDR = Alemania	PKS = Pakistán
BGA = Bulgaria	(Este)	PLD = Polonia
BLG = Bélgica	GFR = Alemania	PRG = Paraguay
BLV = Bolivia	(Oeste)	PRI = Puerto Rico
BND = Burundi	GMN = Alemania	PTC = Portugal
BZE = Belice	GRC = Grecia	RHO = Rodesia <sup>2</sup>
BZL = Brasil	GTA = Guatemala	RMN = Rumania
CBA = Cuba	GUY = Guyana	RWN = Rwanda
CDA = Canadá	HDR = Honduras	SAF = Sur Africa
CHI = China	HGY = Hungría	SAR = Rep. Arabe
CHN = Taiwan	HTI = Haití	Siria

ECD = Ecuador	NCA = Nicaragua	YUG = Yugoslavia
	NGA = Nigeria	ZBA = Zambia
		ZRE = Zaire

<sup>1</sup> Zaire ahora

<sup>2</sup> Zimbabwe ahora

**6. CP = Color Primario de Semilla  
CS = Color Secundario de Semilla**

Se consideran nueve grupos: blanco, crema, amarillo, café, rosado, rojo, morado, negro y otros. Dentro de cada grupo se incluyen todos los rangos de tonalidades, tratando hasta donde sea posible de disminuir la clasificación subjetiva de los colores. Sólo se tienen en cuenta el color primario, que es el predominante, y el color secundario de la semilla cuando ésta presenta dos o más colores. Tanto el color primario como el secundario se toma de semilla recientemente cosechada y seca.

Grupos de Familias	Tipo varietal	País
1 = Blanco	Panamito Blanquillo Arroz Navy Bean Small White Great Northern Alubia Coscorrón Caballero	Perú, Ecuador Colombia Chile Estados Unidos Estados Unidos Estados Unidos Argentina Chile Perú
2 = Crema-beige	Carioca Mulatinho Bico de Ouro Cargamanto Pinto Ojo de Cabra Bayo	Brasil Brasil Brasil Colombia México México México, Perú, Chile, Ecuador
3 = Amarillo	Canario Azufrado Enxofrao Liborino Jalo Amarelo	Perú, México México Brasil Colombia Brasil Brasil
4 = Café-marrón	Ricopardo Redlands Chumbinho	Brasil Australia Brasil
5 = Rosado	Rosinha Rosita Flor de Mayo Miss Kelly Red Kidney  Andino	Brasil México México Jamaica, Belice Estados Unidos Jamaica, Belice, Panamá Colombia
6 = Rojo	Calima Pompador Zamorano	Colombia República Dominicana Honduras
7 = Morado	Sangretoro Roxinho	Colombia Brasil
8 = Negro	Porrillo Jamapa Turrialba ICA-Pijao Rio Tibagi Caracta	El Salvador México Costa Rica Colombia Brasil Venezuela

Grupos de Familias	Tipo varietal	País
9 = Otros	Tórtolas Burros	Chile Chile

#### 7. TMN = Tamaño de Semilla

Es el peso en gramos de una muestra randomizada de 100 semillas. Sin embargo, como clasificación práctica se han formado tres grupos principales de la siguiente manera:

- P = Pequeños, menos de 25 g/100 semillas
- M = Medianos, entre 25 y 40 g/100 semillas
- G = Grandes, más de 40 g/100 semillas

#### 8. HABT = Hábito de Crecimiento

Es un concepto morfoagronómico, definido como el resultado de la interacción de varios caracteres de la planta que determinan su arquitectura final. Estos caracteres son:

- Tipo de desarrollo de la parte terminal del tallo (determinado o indeterminado)
- Número de nudos en el tallo
- Longitud de entrenudos
- Aptitud para trepar y patrón de ramificación.

Se han definido cuatro prototipos principales de hábito así:

- 1 = Arbustivo determinado
- 2 = Arbustivo indeterminado
- 3 = Indeterminado postrado con una o varias guías largas, pero con ninguna o muy poca aptitud para trepar
- 4 = Indeterminado con guía larga y trepadora

#### 9. TIPO = Tipo de frijol (Silvestre o habichuela)

En esta columna se han incluido dos observaciones adicionales, que dada su baja frecuencia no se justifica separarlas en columnas independientes. Se han usado los siguientes códigos:

- \* = Forma silvestre
- H = Habichuela

## Introduction

The goal of the Genetic Resources Unit of CIAT is to assemble, conserve, and characterize all critical germplasm resources in *Phaseolus*, *Manihot*, and several genera of tropical forages, and to research those collections so that they can be utilized more fully by international organizations and national programs.

By 1991, the *Phaseolus* germplasm collection totaled 26,506 accessions of increased and available germplasm. *Phaseolus vulgaris* and its wild ancestors constitute the major component of this collection (89.5%), followed by *P. lunatus* (5.5%), *P. coccineus* (2.3%), *P. polyanthus* (1.1%); and *P. acutifolius* (1.0%). The true, wild nonancestral species embrace 22 species but cover only 0.6% of the total collection (see Table 1).

This catalog of the *P. vulgaris* collection is an update of the first catalog published in 1984. Since then, the collection has increased by more than 7,000 accessions. In 1977, CIAT accepted responsibility for the world's germplasm collection of cultivated species of *Phaseolus* beans. More than 80% of the collection were introduced to CIAT as kind donations from national, regional and international genebanks. The collection is held at CIAT in trust for the use of present and future generations of research workers in all countries throughout the world. The collection at CIAT also serves to back up those countries who for various reasons have lost their collections and need to recover them.

The present catalog therefore describes about 23,700 accessions of both cultivated and wild forms of *P. vulgaris* and includes the following sections:

1. Brief description of germplasm frequencies according to present status, geographic origin, seed type, and growth habit.
2. Definition of descriptors. Only basic passport data, as well as seed type and growth habit, are included. If desired, additional data can be provided upon request.
3. Sequential "G" number list, including descriptors.
4. Alphabetical list by IDENTIFICATION, for quick search of "G" numbers.
5. Alphabetical list by "REGLOCAL", Local Register, for quick search of "G" numbers.

Particular sets of the catalog, i.e., by country, seed type, or growth habit can be provided on diskettes, which use DBASE III Software. Requests for germplasm (small quantities) and/or information can be addressed to:

## Geographic origin of the *P. vulgaris* germplasm (Nov./1991)

### Regions

NA: North America  
 CA: Central America  
 Cb: Caribbean

AS: Andes South America  
 NS: Non-Andes South America  
 EU: Europe

AF: Africa  
 AO: Asia-Oceania  
 ME: Middle East  
 Un: Unknown

**2<sup>nd</sup> Section:** Definition of descriptors. It includes basic passport data, as well as seed type and growth habit.

## DESCRIPTORS

### 1. NO.CIAT = CIAT's Number

CIAT's number, or germplasm number, is the number assigned to the original accession in the Genetic Resources Unit when the seed has been increased. This number, of five digits, is preceded by the letter "G". In some cases another letter (A, B, C, etc.) follows the five digits; this letter corresponds to justified separations from the original accession.

### 2. IDENTIFICATION = Identification

It is the local or varietal name of the accession, or the local register used by the seed donor. It is recorded as originally received, and corrections are made only on names of very well known materials.

### 3. REGLOCAL = Local Register

Corresponds to the register number used by the national institution, scientist, or collector donating the seeds. This local register can be either numerical or alphanumeric. In some cases, it could be used as identification when the latter does not exist or is unknown.

### 4. ORIG = Origin

Basically, it is the country where the material was collected. However, if the material was obtained through a donation from a national bank, a search is carried out in order to trace back, as far as possible, the path of such material; the last known source is recorded as origin. When information is not available, "ORIG" (origin) is left blank. The codes for countries are the same as those used for "PROC" (source).

### 5. PROC = Source

This is the seed donor's country, as designated by one of the following codes:

AFG = Afghanistan	EGT = Egypt	NWY = Norway
AGA = Algeria	ELS = El Salvador	NZL = New Zealand
AGL = Angola	ETP = Ethiopia	PER = Peru
ARA = Arabia	FRC = France	PKS = Pakistan
ARG = Argentina	GAM = Gambia	PLD = Poland
ATL = Australia	GDR = Germany (East)	PRG = Paraguay
BGA = Bulgaria	GFR = Germany (West)	PRI = Puerto Rico

<sup>2</sup> Zimbabwe now

**6. CP = Primary Seed Color**  
**CS = Secondary Seed Color**

There are nine color groups: white, cream, yellow, brown, pink, red, purple, black, and others. In order to avoid a subjective classification of color, an attempt has been made to include the widest spectrum possible of shades within each color. The primary color is the predominant seed coat color; if the seed has more than one color, then the secondary color is also recorded. Color is ascertained from dry seeds recently harvested.

<b>Family Groups</b>	<b>Varietal Seed types</b>	<b>Country</b>
1 = White	Panamito Blanquillo Arroz Navy Bean Small White Great Northern Alubia Coscorron Caballero	Peru, Ecuador Colombia Chile United States United States United States Argentina Chile Peru

3 = Yellow	Canario Azufrado Enxofrao Liborino Jalo Amarelo	Peru, Mexico Mexico Brazil Colombia Brazil Brazil
4 = Brown-maroon	Rico Pardo Redlands Chumbinho	Brazil Australia Brazil
5 = Pink	Rosinha Rosita Flor de Mayo Miss Kelly Red Kidney  Andino	Brazil Mexico Mexico Jamaica, Belize USA, Jamaica, Belize, Panama Colombia
6 = Red	Calima Pompador Zamorano	Colombia Dominican Republic Honduras
7 = Purple	Sangretoro Roxinho	Colombia Brazil
8 = Black	Porrillo Jamapa Turrialba ICA Pijao Rio Tibagi Caraota	El Salvador Mexico Costa Rica Colombia Brazil Venezuela

Family Groups	Varietal Seed types	Country
9 = Others	Tortolas Burros	Chile Chile

#### 7. TMN = Seed Size

It is the weight of a sample of 100 seeds taken at random. However, as a practical mean of classification, three main seed sizes have been established as follows:

- P = Small, less than 25 g/100 seeds
- M = Medium, between 25 and 40 g/100 seeds
- L = Large, heavier than 40 g/100 seeds

#### 8. HABT = Growth Habit

This is a morphoagronomic concept describing behavior resulting from the interaction of several characters that determine the final plant architecture. These characters are:

- Type of growth of the stem (determinate or indeterminate)
- Number of nodes on the stem
- Length of internodes
- Climbing ability and branching pattern.

Four prototypes of growth habit have been defined as follows:

- 1 = Bush, determinate
- 2 = Bush, indeterminate
- 3 = Indeterminate prostrate with well-developed, lateral branching but low or no climbing ability
- 4 = Indeterminate with long main stem and tendrils, and high climbing ability.

#### 9. TIPO = Bean Type (wild or snap bean)

This column contains two additional observations, which due to their low frequencies, do not justify independent columns. The following codes have been used:

- \* = Wild form
- H = Snap bean

**3<sup>ra</sup> Sección:** Lista secuencial por números "G", incluyendo los descriptores.

**3<sup>rd</sup> Section:** Sequential "G" number list, including descriptors.
