Spatial Analysis of the Whitefly problem in  
Central America, Mexico and the Caribbean

The GIS component:  
user and technical documentation

Justine Klass  
GIS Department  
CIAT, Cali  
Colombia

December 1998

## Introduction

As part of the on-going project "Sustainable Integrated Management of Whiteflies as Pests and Vectors of Plant Viruses in the Tropics", one of the main outputs for Phase 1 included the building of a spatial database using a geographical information system (GIS).

The study area includes Central America, Mexico and the Caribbean.

The purpose of this was to develop a digital database that integrates all the information collected by the whitefly project and to enable end-users to view the information available. Some of the spatial information available, include:

- Areas affected by whitefly-transmitted viruses for different years (1970's, 1990's, 1994, 1998)
- Base information, such as, rivers, roads, towns, land-use cover, Digital Elevation Model(DEM), Holdridge life zones
- Climate: rainfall, mean minimum temperature, mean maximum temperature, evaporation and the number of dry months at 3-km pixel size
- Economic loss
- Crop production by municipality (where information is available). Crops include tomato, tobacco, cotton, peppers, beans, cucumber, squash, brocoli
- Whitefly occurrences based upon climatic factors required for the whitefly to exist.

The whitefly v1.0 package contains a variety of tools that allows for the generation of analysis information. Some of the analysis capabilities include:

- Site characterization under the cursor
- Site characterization of an area unit (ie a polygon)
- Location of similar climatic areas, within a percent range, for the site characterization returned for a point.
- Location of similar climatic areas, as is found occurring in an area unit.
- Dynamic link of Excel tab-delimited text files containing information at any administrative level to an existing administrative boundary coverage to enable real time visualization of external tabular data. Edition of the file is done through Excel.
- Generation of point coverages from an Excel file.
- Creation of whitefly occurrence information based upon the physical factors required for a whitefly to exist.

The information can be viewed using Arcview3.0a+ and layouts can be created and printed with the results to queries made.

One of the main objectives of this interface has been to enable the end-user the flexibility to generate additional themes, from new information as it is gathered from the field. This can be accomplished by generating point, line or polygon themes from data collected by a GPS or to create themes based upon the varying administrative levels available for each country.

## Building the Datasets

The information used for this project was obtained from various sources. Some of these include the GIS lab at CIAT, the internet and other centers in Central America and the Caribbean.

All the data sets were processed using Arc/INFO 7.1 on a UNIX workstation.

## Developing the Interface

The interface was developed using Arcview3.0b on a UNIX platform but also adapted for use on a PC environment. In order to run this application successfully the user requires at least ArcView3.0b with the spatial analysis and dialog designer extensions. All the functionalities were developed using Avenue.

### *Features included from the standard ArcView3.0a*

- FILE:** General file opening and managing grids
- EDIT:** Editing the themes
- VIEW:** Adding themes to views
- ANALYSIS:** Analysis features included with spatial analysis
- GRAPHICS:** Graphic adding capabilities
- HELP:** On-line Arcview help

### *Extensions required:*

- Spatial Analysis
- Network Analysis
- Database Themes
- Dialog Designer

### *Summary of the features included in the interface*

The interface contains the following additional options:

- GRID EDITS:** This enables the user to combine, merge, mosaic, aggregate or clip grids.
- VIRUS:** This contains the virus information for a limited number of crops. (Beans mid1990's, Tomatoes mid1970's and mid1990's, Hotspots 1998, BGMV 1994<sup>1</sup>)
- WHITEFLY:** Areas where whiteflies are likely to occur based on critical and optimum climate and environmental factors. Whitefly biotype and species information is not available at the present time.

<sup>1</sup> BGMV – bean golden mosaic virus

**CROPS:** Includes the production information for the following crops: beans, tomatoes, melon, watermelon, peppers, cotton, squash, chiles, soya, tobacco and cucumber. This is not complete for all countries.

**ENVIRONMENT:** Includes the base information such as, the different administrative level boundaries (country, department and municipio), roads, towns, holdridge lifezones, digital elevation model, slope, aspect)

**CLIMATE:** Rainfall, minimum temperature, maximum temperature, evaporation and number of dry months. (monthly and annual)

**SPATIAL CHARACTERIZATION:** Query point and area of interest, perform site characterization as well as obtain areas with a similar climate as that queried.

**ECONOMIC:** Enables the user to view the economic information pertaining to a region. This includes yield losses and/or economic losses.

**UPDATE:** Enables users to update existing tab-delimited files and create view the new information. This can only be applied to administrative boundary level information (municipio, department or country). In addition, users can import point information provided the file contains latitude and longitude information.

**HELP:** Online html help that is easily displayed using an internet browser.

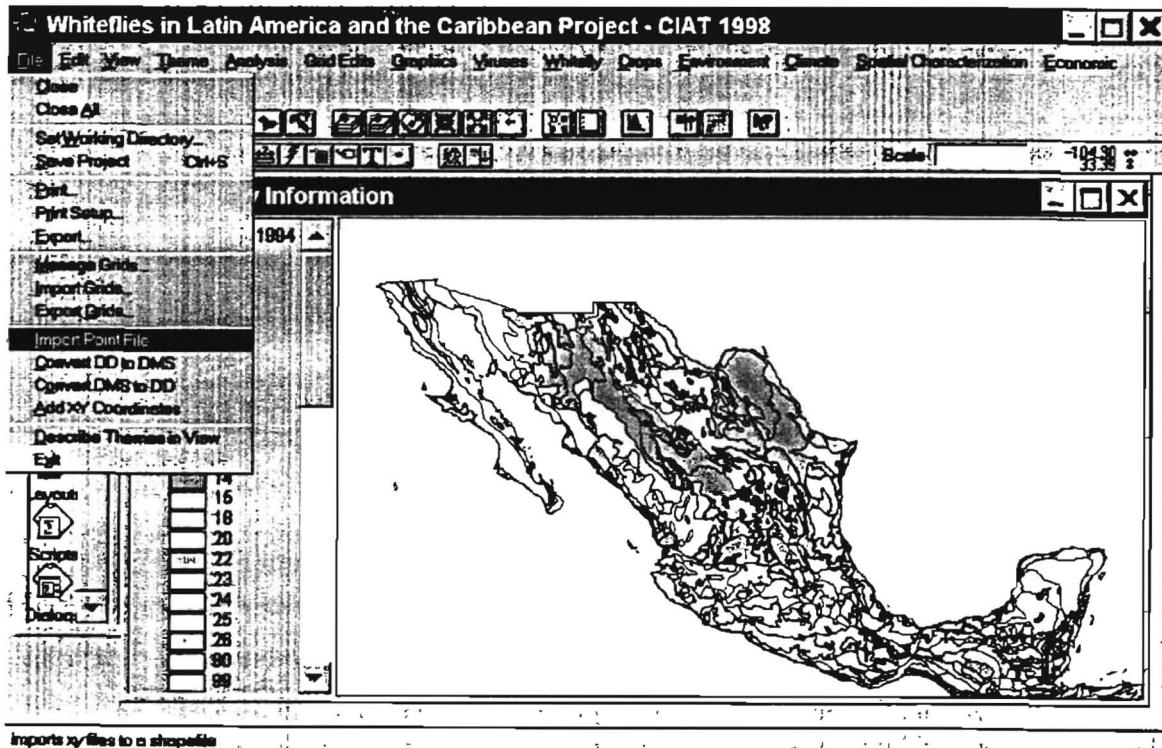

**NOTE:** The new information that can be created is dependent upon the administrative level information available for each country and on the GPS points provided. If new regions or information that cannot be created by the features provided the user will need to have the data digitized.

User's Guide

#### **Additional features included in the project**

• FILE

## *Import Point File*

### Convert DD to DMS

Convert DMS to DD

Add XY Coordinates (only works on point and polygon themes)

### *Describe Themes in View*

### ***Import Point File***

Enables the user to import a *xy-coordinate* file containing information on point, polygons or lines. This can be collected by a GPS and imported directly into the present project.

**NOTE:** The xy-coordinate file must be in comma delimited format in the following order

Stn id, x coordinate, y coordinate

Example of file containing coordinates:

```
ID,x,y
3,-72.1,10.2
4,-73.2,11.2
5,-75.6,11.2
6,-78.35,12.1
```

To link additional information to the new shapefile (point, polygon or line), the user will need to import the attribute table and join this to the table associated with the new shapefile.

#### **Convert DD to DMS**

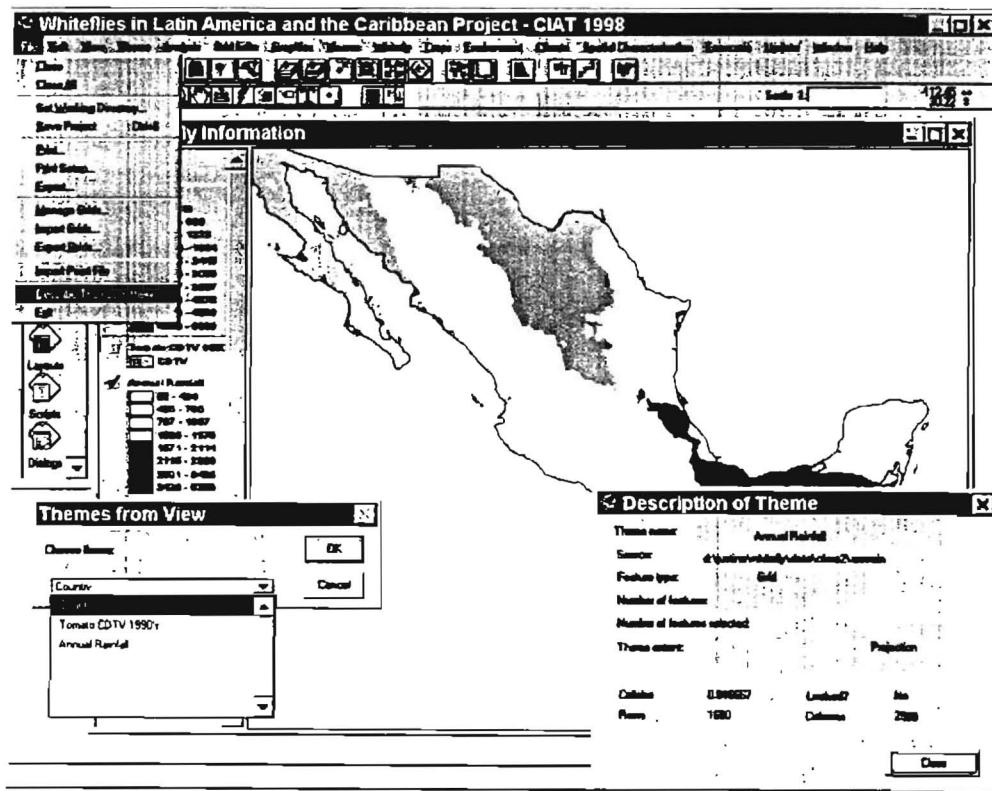

Enables the user to convert coordinates from decimal degrees to degrees-minutes-seconds. The results will be added to a table within the project.

#### **Convert DMS to DD**

Enables the user to convert coordinates from degrees-minutes-seconds to decimal degrees. The results will be added to a table within the project.

#### **Describe Themes in View**

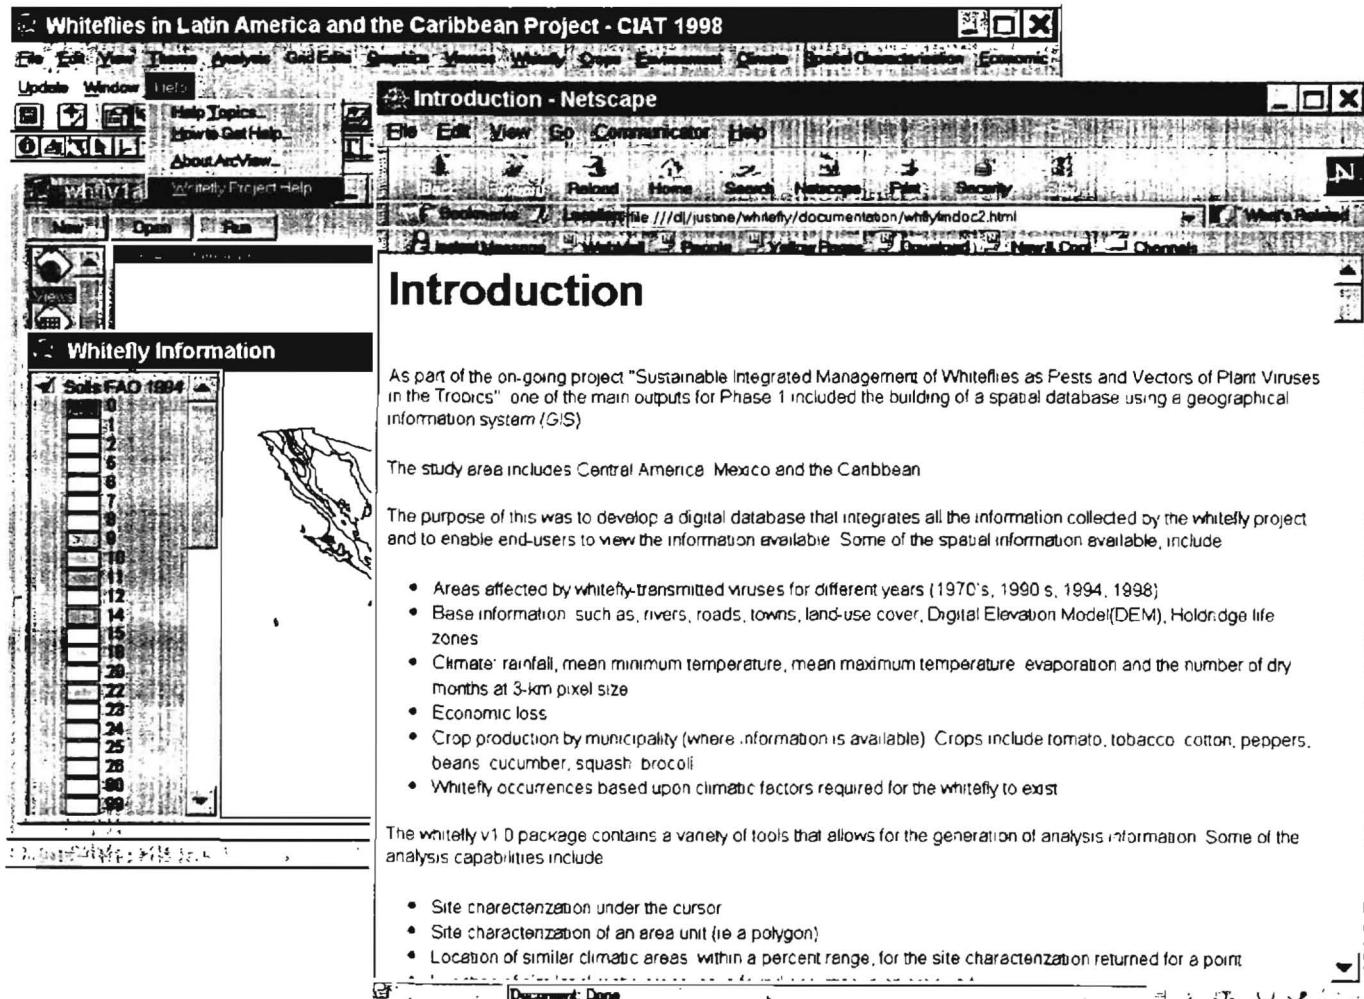

This option enables the viewer to obtain information about an active theme (vector or shapefile) or a grid that is in the view.

- **HELP**

*Whitefly On-line Html Help*

On-line help is available through the Netscape Browser.

New features included in the project

## • GRID EDITS

*Grid Clip*

*Merge Grids*

*Combine Grids*

*Aggregate*

*Mosaic*

### **Grid Clip**

Enables the user to clip a grid. The user has two options: a) to clip an area using a polygon or b) to clip an area based upon a box.

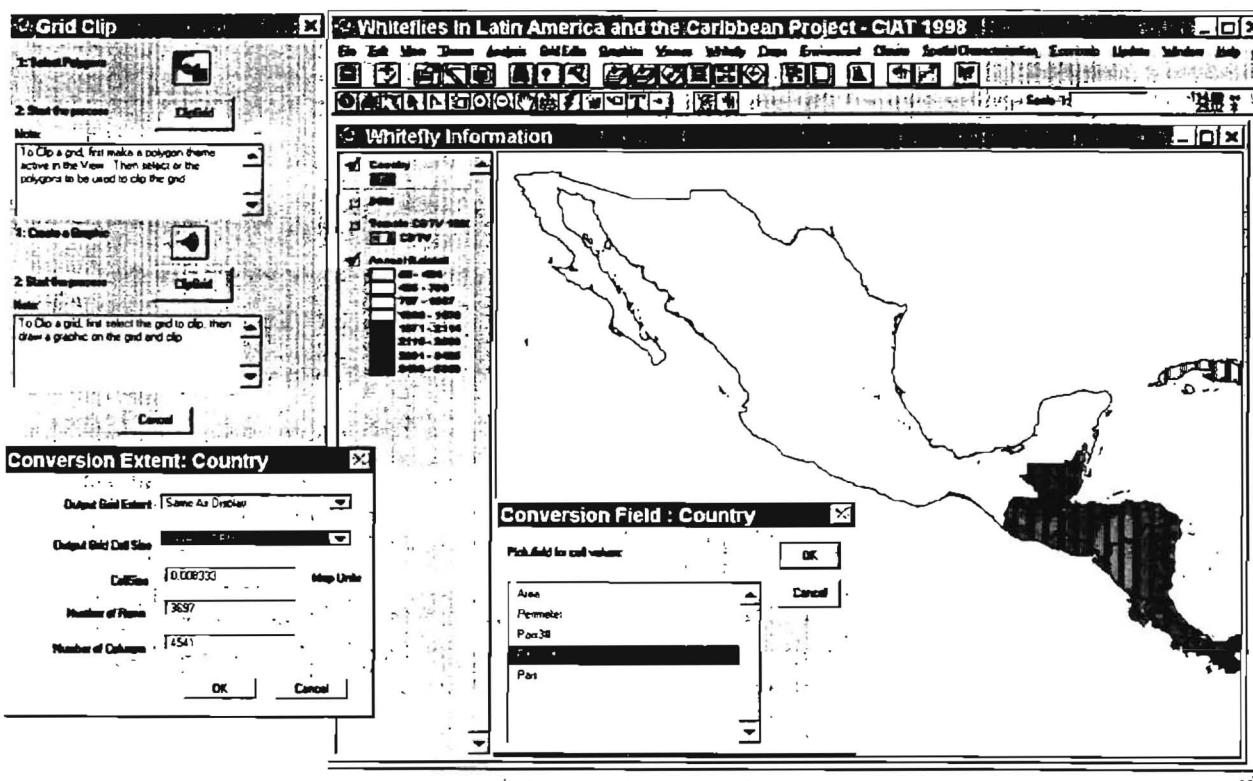

#### a) *to clip an area using a polygon*

This enables the user to perform a country by country analysis without incorporating the entire region.

1- Select a polygon (as illustrated in yellow)

2- Click the button **ClipGrid**.

The user will be prompted for additional information, this includes the extent and cell size for the new grid, the field to use for the conversion, the grid to clip and a new filename.

Once the process is finished the new grid will be added to the display, as illustrated below.

Tabla 1. Leyenda geomorfológica del municipio de Puerto López

UNIDAD CLIMATICA	GRAN PAISAJE (UNIDAD GENETICA DE RELIEVE)	PAISAJE - LITOLOGIA	PRINCIPALES CARACTERISTICAS DEL PAISAJE Y PROCESOS GEOMORFOLOGICOS DOMINANTES	SIMBOL O
CALIDO HUMEDO	LOMERIO FLUVIO- GRAVITACIONAL	LOMAS Y COLINAS En sedimentitas y sedimentos clásticos aluviales mixtos.	Relieve quebrado, muy fuertemente disectado, colinas de cimas agudas, laderas rectilíneas, largas, con pendiente dominante entre 12 - 25%. En algunos sectores de presenta erosión moderada con formación de cárcavas.	Lde1-2
		LOMAS En sedimentitas y sedimentos clásticos aluviales arcillosos.	Relieve quebrado a ondulado, fuerte a moderadamente disectado, lomas con cimas subredondeadas, laderas rectilíneas, medias, pendiente de 7-12 y 12-25%, erosión ligera a moderada.	Lcd
	ALTIPLANICIE ESTRUCTURAL EROSIONAL	LOMAS ASOCIADAS CON MESAS Y GLACIS MIXTOS En sedimentos clásticos aluviales Arcillosos y conglomerados plio – pleistocénicos	Relieve moderadamente ondulado, moderadamente disectado, lomas de cimas redondeadas, con laderas cortas y medias, pendiente entre 3-7 y 7-12%. Glacis con relieve plano – inclinado, pendiente entre 3-7. Las mesas son de cimas planas, amplias, con taludes cortos y casi verticales. Se observa erosión en las laderas y taludes.	LCbc
		TERRAZA ESTRUCTURAL - EROSIONAL. Sobre depósitos aluviales Arcillosos y conglomerados plio – pleistocénicos	Superficies muy amplias con relieve ligeramente plano, pendientes 1-3%, microrelieve cóncavo-convexo. En las áreas bajas y esteros se presentan inundaciones y/o encarcamientos periódicos.	PTb

UNIDAD CLIMATICA	GRAN PAISAJE (UNIDAD GENETICA DE RELIEVE)	PAISAJE – LITOLOGIA	PRINCIPALES CARACTERISTICAS DEL PAISAJE Y PROCESOS GEOMORFOLOGICOS DOMINANTES	SIMBOL O
------------------	---	---------------------	---	----------

<b>CALIDO HUMEDO</b>	<b>VALLECITOS ALUVIAL – COLUVIALES</b>	<b>VALLES ESTRECHOS COLUVIO –ALUVIALES</b> <b>Depósitos mixtos aluviales y coluviones heterométricos</b>	Superficies con relieve ligeramente plano, a plano cóncavo, pendientes 1-3%. Inundaciones y encharcamientos periódicos	<b>Vca</b>
	<b>PLANICIE ALUVIAL</b>	<b>PLANO DE INUNDACION ALUVIAL</b> <b>Cantos, gravas y arenas aluviales actuales.</b>	Superficies con relieve ligeramente plano, pendiente 1-3%. Microrelieve plano-convexo. Inundaciones y encharcamientos periódicos.	<b>Paa</b>
		<b>TERRAZA AGRADACIONAL NIVEL 1 INFERIOR</b> <b>Sedimentos aluviales arcillosos</b>	Superficies con relieve plano, pendiente 1-3%. Microrelieve plano - cóncavo. Planadas extensas interrumpidas por cauces antiguos, sufren inundaciones raras, encharcamientos sectorizados.	<b>PTAa</b>
		<b>TERRAZA AGRADACIONAL NIVEL 2</b> <b>Sedimentos aluviales, con mantos eólicas localizados y capas de gravas a Diferentes profundidades</b>	Superficies con relieve ligeramente plano a ligeramente ondulado, pendientes 1-7%, microrelieve concavo-convexo, zurales, encharcamientos periódicos.	<b>PTBa</b>
	<b>VALLE ALUVIAL DE LOS RIOS YUCAO Y MANACACÍAS</b>	<b>PLANO DE INUNDACION ACTIVO DE RIO MEANDRICO</b> <b>Depósitos clásticos hidrogénicos.</b>	Superficies con relieve ligeramente plano, pendientes 1-3%, Microrelieve cóncavo-convexo. Existen lagunas, meandros y cauces abandonados. Inundaciones y encharcamientos periódicos.	<b>MA</b>

New features included in the project

- **GRID EDITS**

*Grid Clip*

*Merge Grids*

*Combine Grids*

*Aggregate*

*Mosaic*

***Grid Clip***

Enables the user to clip a grid. The user has two options: a) to clip an area using a polygon or b) to clip an area based upon a box.

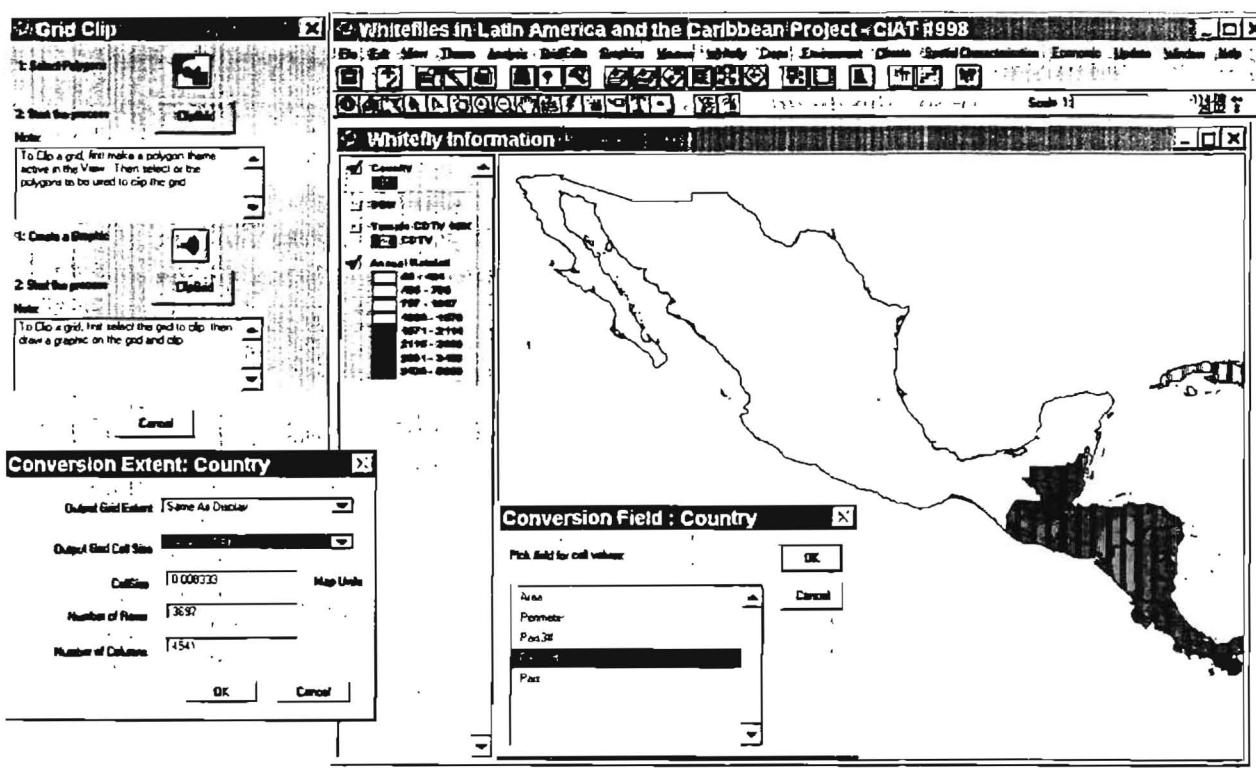

a) ***to clip an area using a polygon***

This enables the user to perform a country by country analysis without incorporating the entire region.

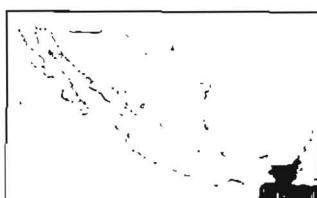

1- Select a polygon (as illustrated in yellow)

2- Click the button ***ClipGrid***.

The user will be prompted for additional information, this includes the extent and cell size for the new grid, the field to use for the conversion, the grid to clip and a new filename.

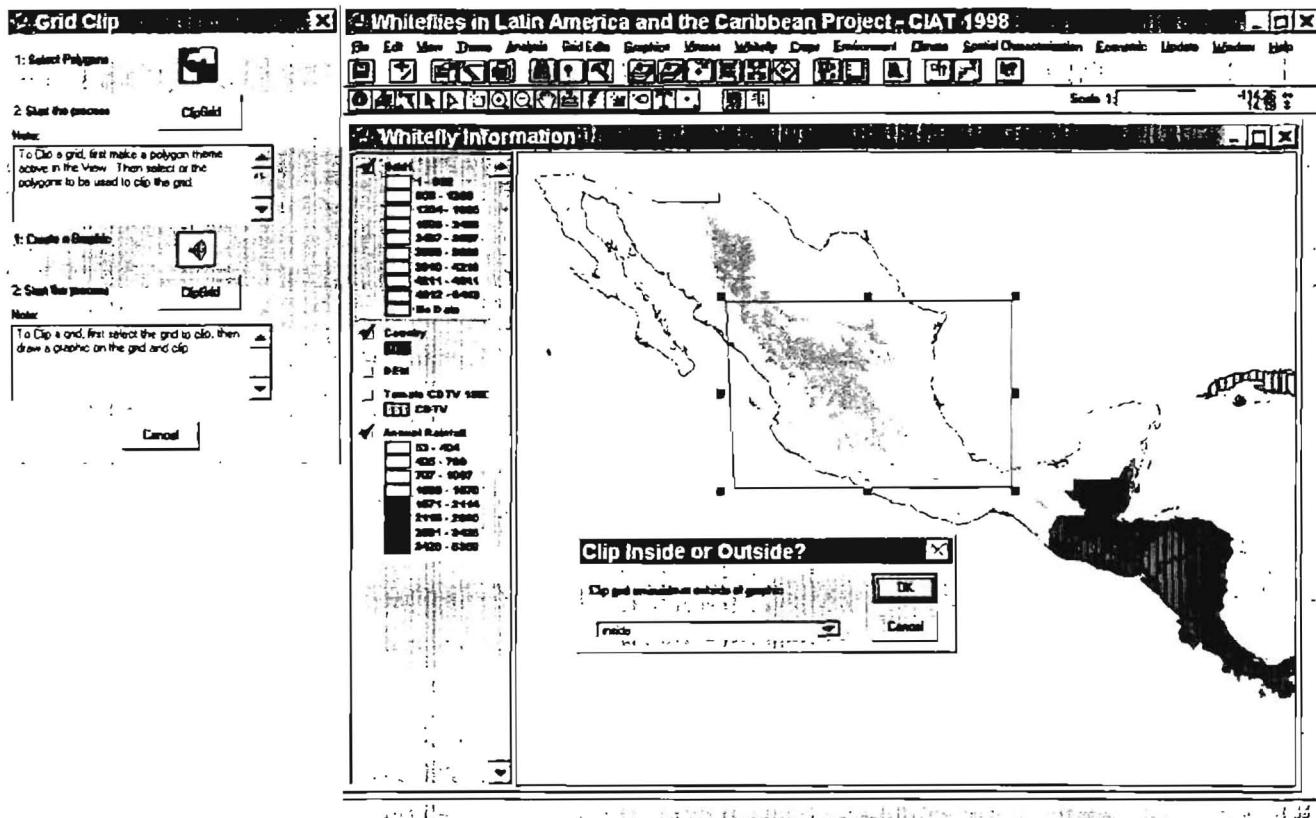

Once the process is finished the new grid will be added to the display, as illustrated below.

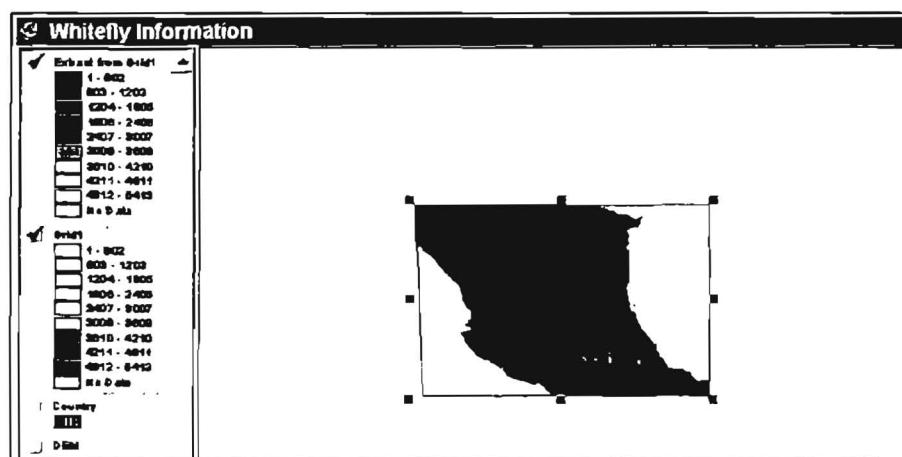

**b) to clip an area based upon a box**

- 1- Create a graphic in the view
- 2- Activate the grid theme to be clipped. ( In this example Grid1 is active)
- 3- Click **ClipGrid** button

The user will be prompted whether to include the area inside or outside the graphic area.

Once the process is finished the new grid will be added to the display, as illustrated below. The area in blue is the newly clipped grid.

**Merge Grids**

Enables the user to merge a list of Grids together.

**Combine Grids**

Enables the user to combine a list of Grids together. This will compute the numerous combinations available with the combined grids.

**Aggregate**

Enables the user to aggregate a grid.

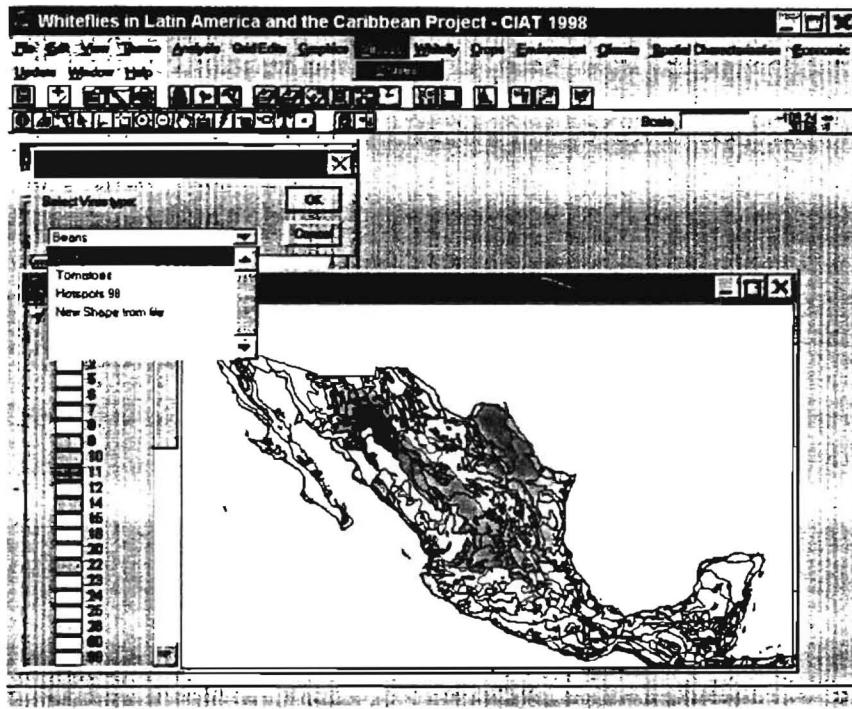

**Mosaic**

Enables the user to mosaic grids together.

## VIRUSES

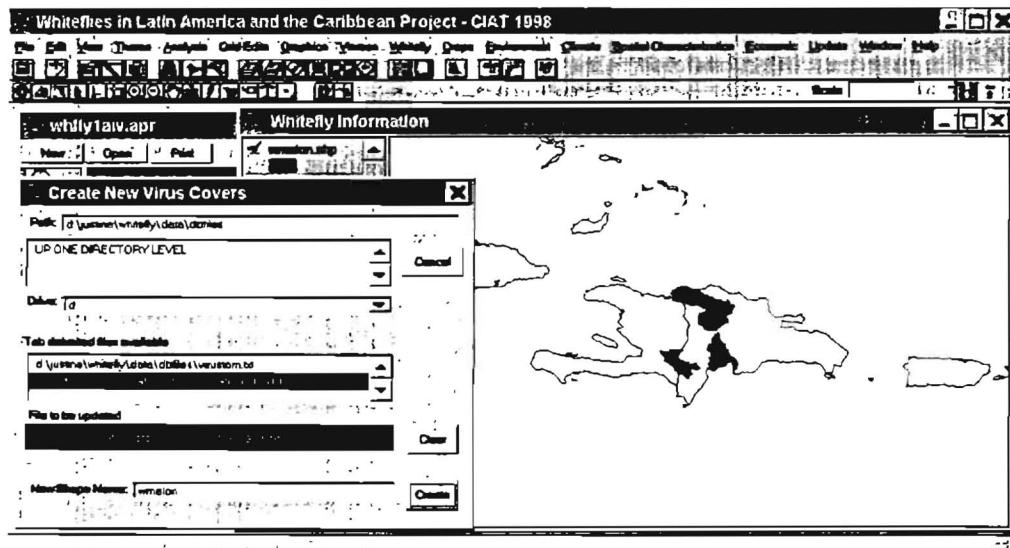

### *Viruses transmitted by the whitefly*

The user can select the existing data ( ie beans, tomatoes or identified hotspots for 1998) or create new shapefiles using tab delimited files.

### **Create New Shape from file**

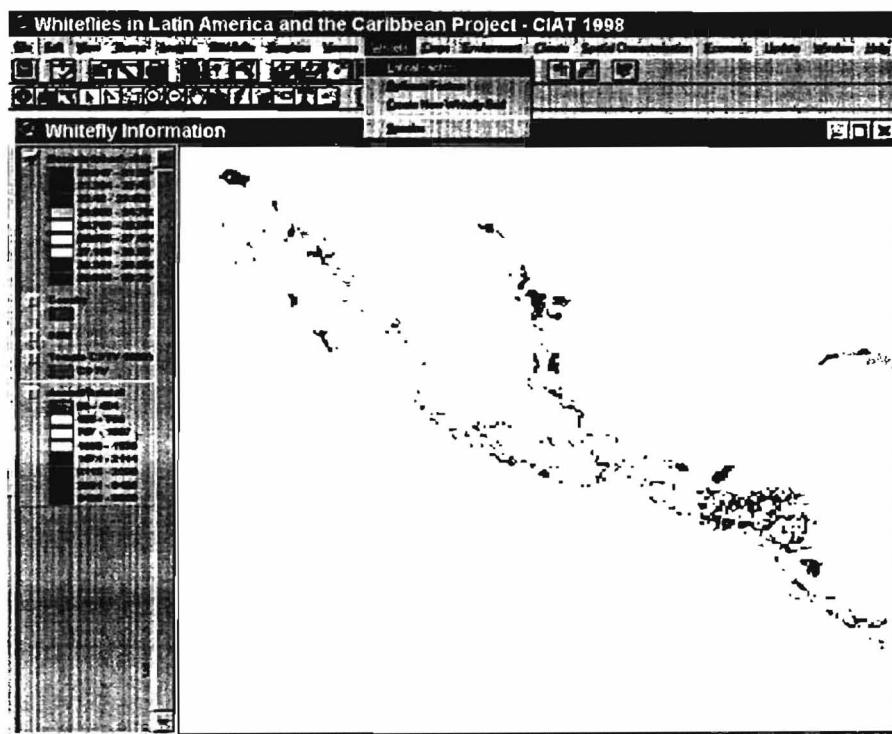

Select the tab delimited file that contains the administrative level information to be mapped.

## WHITEFLY

### Whitefly Information

- a) Critical Factors
- b) Optimum Factors
- c) Create New Whitefly Grid
- d) Species (not available at this time)

#### a) + b) Critical Factors and Optimum Factors

The critical and optimum factor information for the existence of whiteflies was based on information provided within CIAT (F Morales, P Anderson).

Description	Geog Locn	Cover name	Feature	Projection	Source	Scale
Bemisia tabaci optimum factors ( elev: 0-1250, Temp: 20-30) <sup>2</sup>	LAC	Btopt	grid	DD(wgs84)	Climate: P Jones (CIAT) Factors: F Morales, P Anderson	.167
Bemisia tabaci critical factors ( elev: 0-1250, Temp: 15-32) <sup>1</sup>	LAC	Btcrit	grid	DD(wgs84)	Climate: P Jones (CIAT) Factors: F Morales, P Anderson	.167

<sup>2</sup> Mean temperature was calculated as follows:  $(\sum t_{min,i} + \sum t_{max,i}) / 2$

Where  $t_{min}$  is the mean annual minimum temperature and  $t_{max}$  is the mean annual maximum temperature and  $i_1 \dots i_{12}$  represent the month (Jan to Dec)

### c) Create New Whitefly Grid

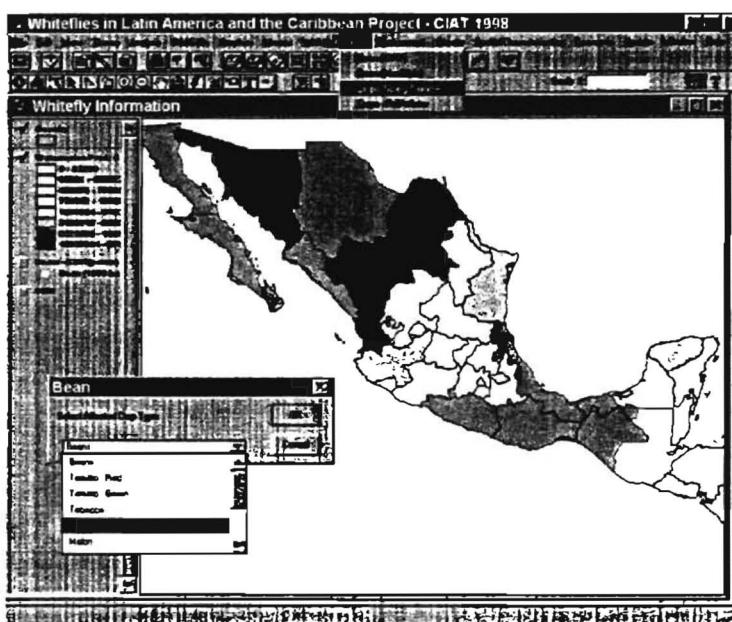

This enables the user to create a new grid based upon elevation and temperature ranges.

- **CROP**

#### *Crop Information*

This includes the location of specific crops at administrative level 2, as points and by season at administrative level 2.

The crop information, at the present time is quite limited due to its availability. The information available includes:

- beans ( points, where 1 dot = 1000 ha)
- bean production by municipio
- crops for Mexico, by season
- Guatemala ( location of growing areas with specific crops)
- El Salvador (cotton)

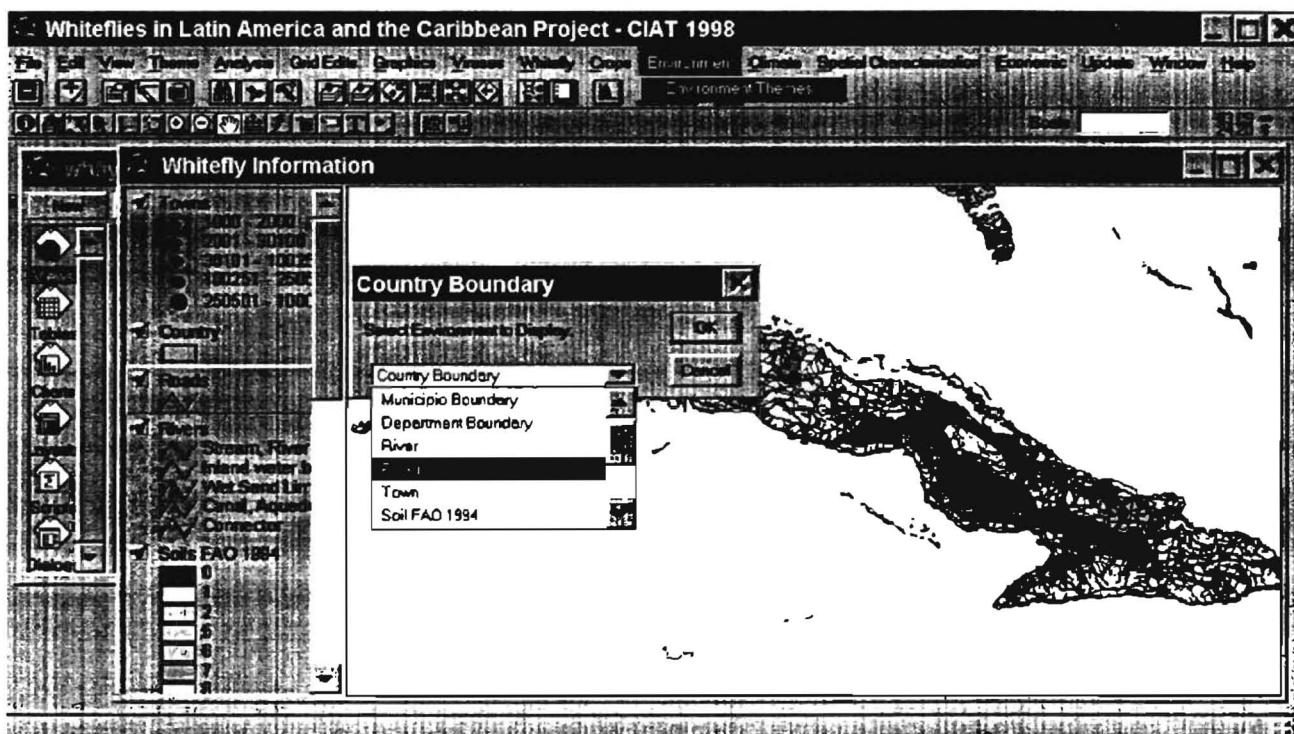

Mexico is the most complete at the present time.

For additional information regarding the crop information, please refer to Appendix 1 ( data source information)

## • ENVIRONMENT

### *Environmental Information*

The environmental information contains the base information for the study area.

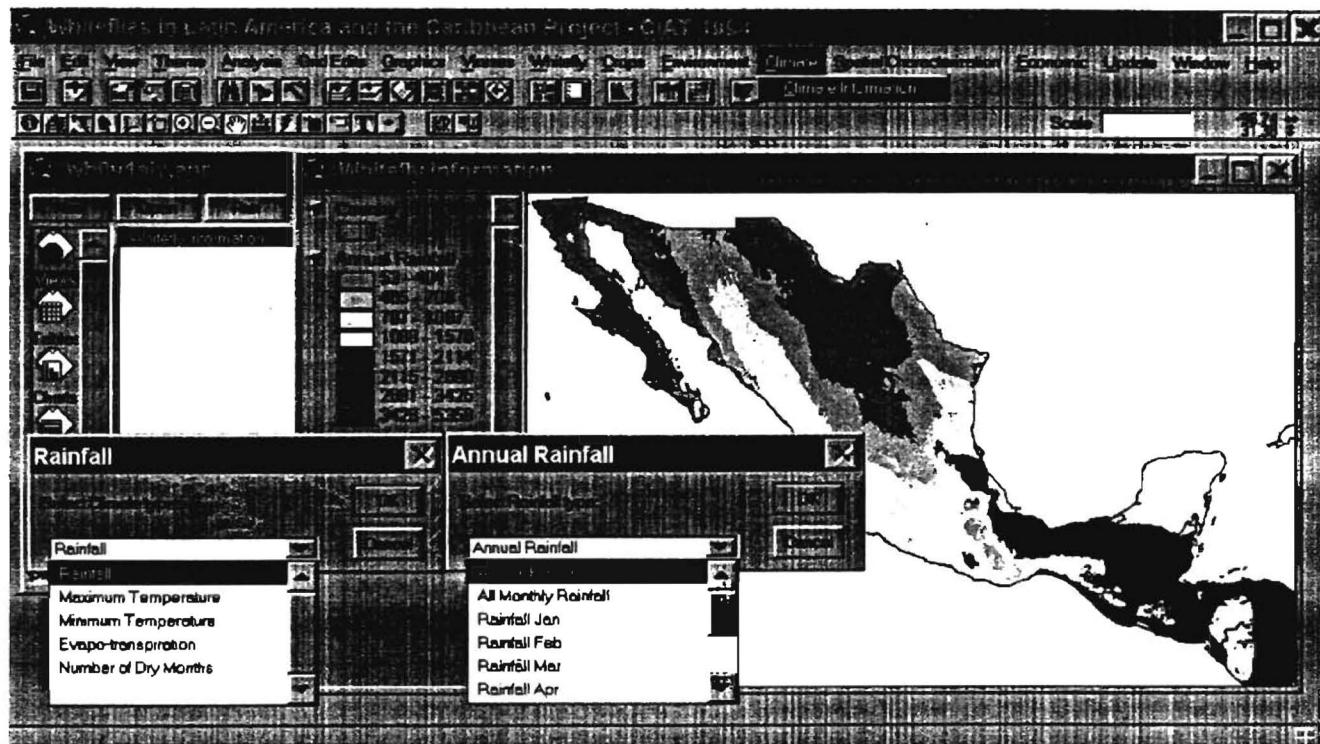

All of the environmental information included in the project was obtained from the GIS and Landuse department at CIAT. The information includes:

- Country, administrative level 2, level 3 and level 4 boundaries
- Roads, Rivers, Soils
- Towns, Population
- Landuse
- Slope, Aspect, Digital Elevation Model(DEM)

## • CLIMATE

### Climate Information

The user can display various climate surfaces. These include the annual climate surfaces as well as the monthly mean surfaces. First the user will be prompted for the climate type and then the surface to be displayed.

The climate information includes: rainfall, minimum temperature, maximum temperature, evapotranspiration and the number of dry months.

Two sources of climate information have been included. One includes the Caribbean and the second only covers Central America. The climate information provided are from two different data sources and are at two different scales. For more information on the climate surfaces refer to appendix 1

- SPATIAL CHARACTERIZATION

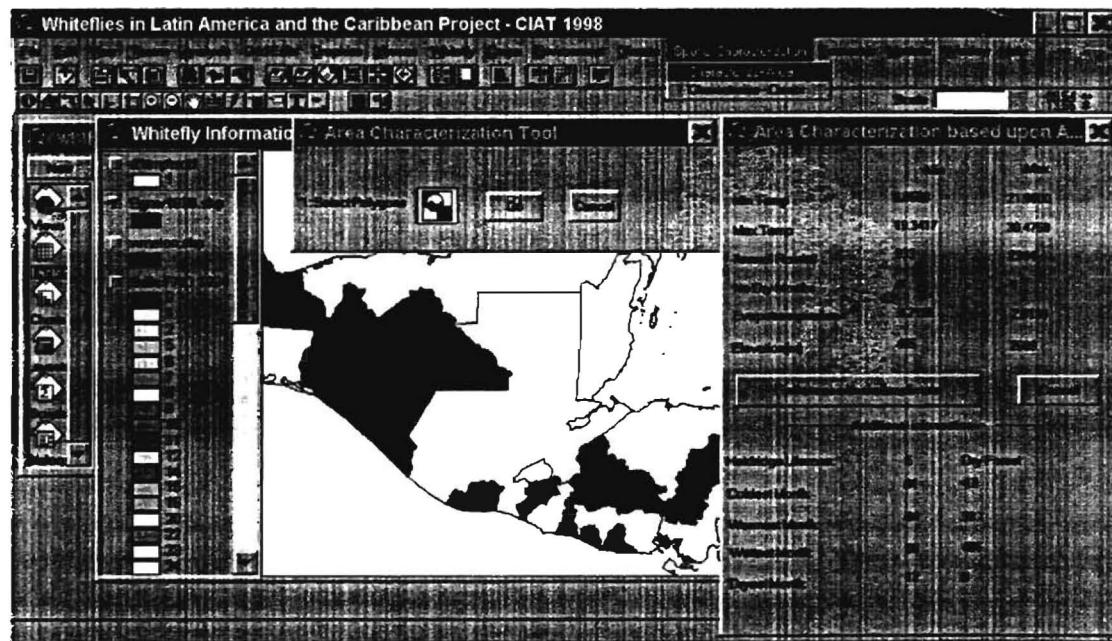

### *Spatial Characterization Information*

- a) Characterize – Area
  - b) Characterize – Cursor

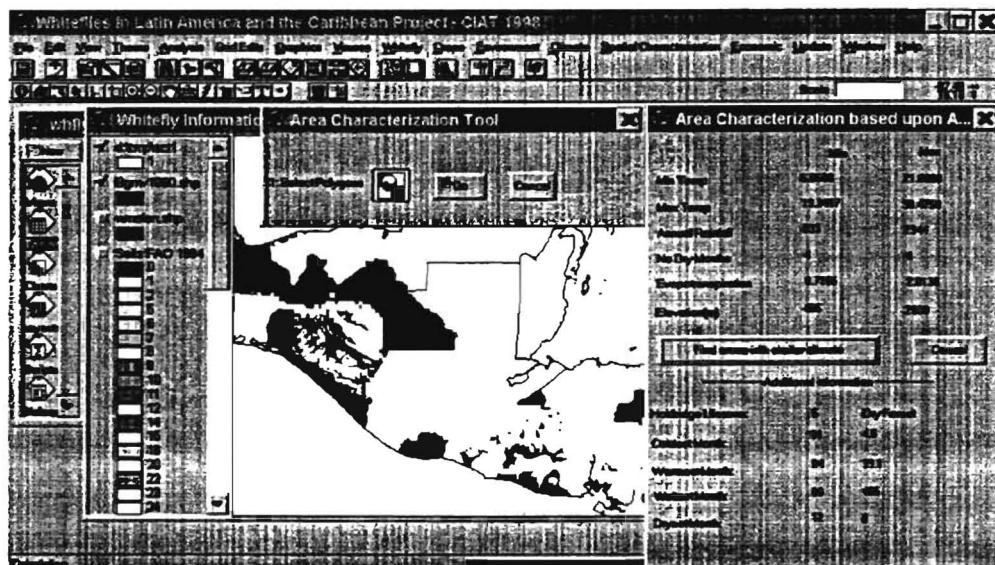

The user is able to characterize the area within a polygon or under a point. Once this is accomplished the user can locate other areas with similar climate.

a) Characterize – Area

Select a polygon(highlighted in yellow) and then press go. The coverage to be characterised must be active. Once a polygon is selected, press GO, and the climate characteristics will be summarized as illustrated below.

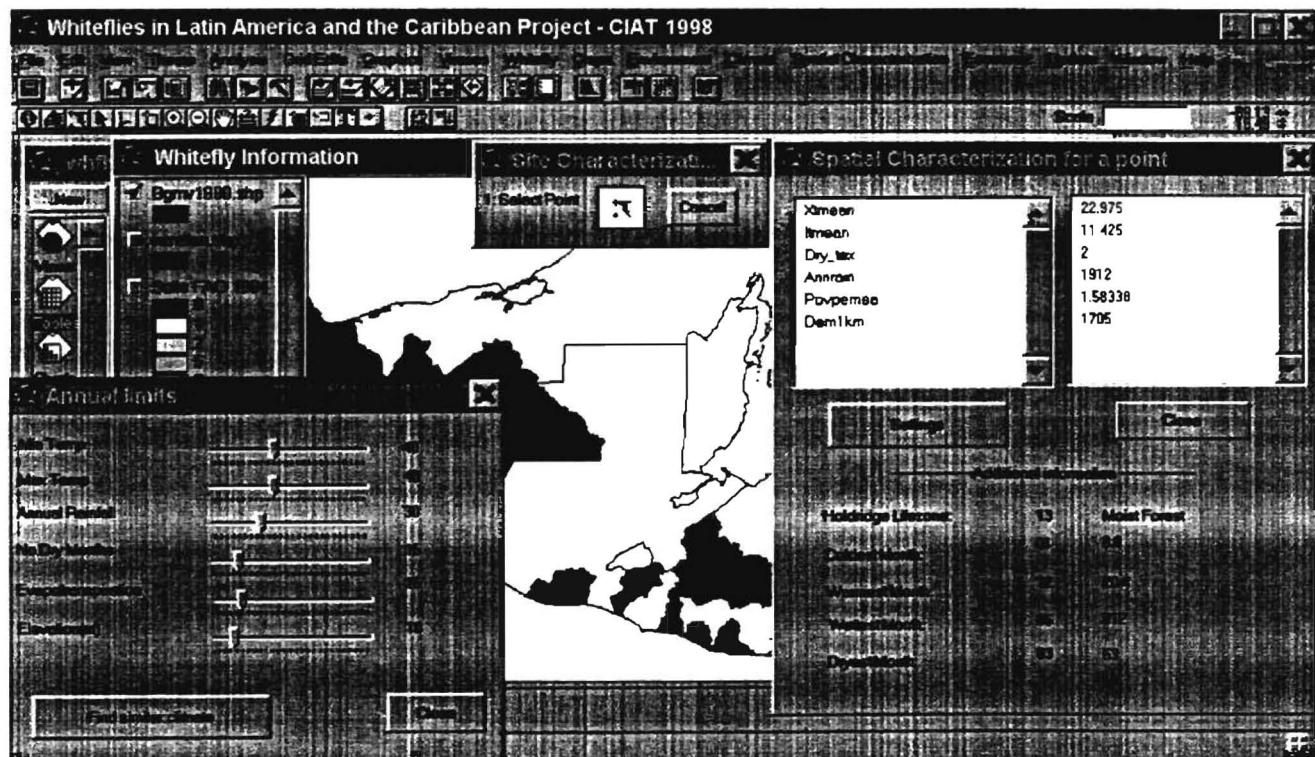

Once the polygon has been characterised the user can find other areas with the same climate characteristics, as illustrated below (in yellow).

**b) Characterize – Cursor**

The user can obtain climate information for a point. This is summarized in the menu illustrated. Additionally, the user can locate other sites with similar climate within a percent range.

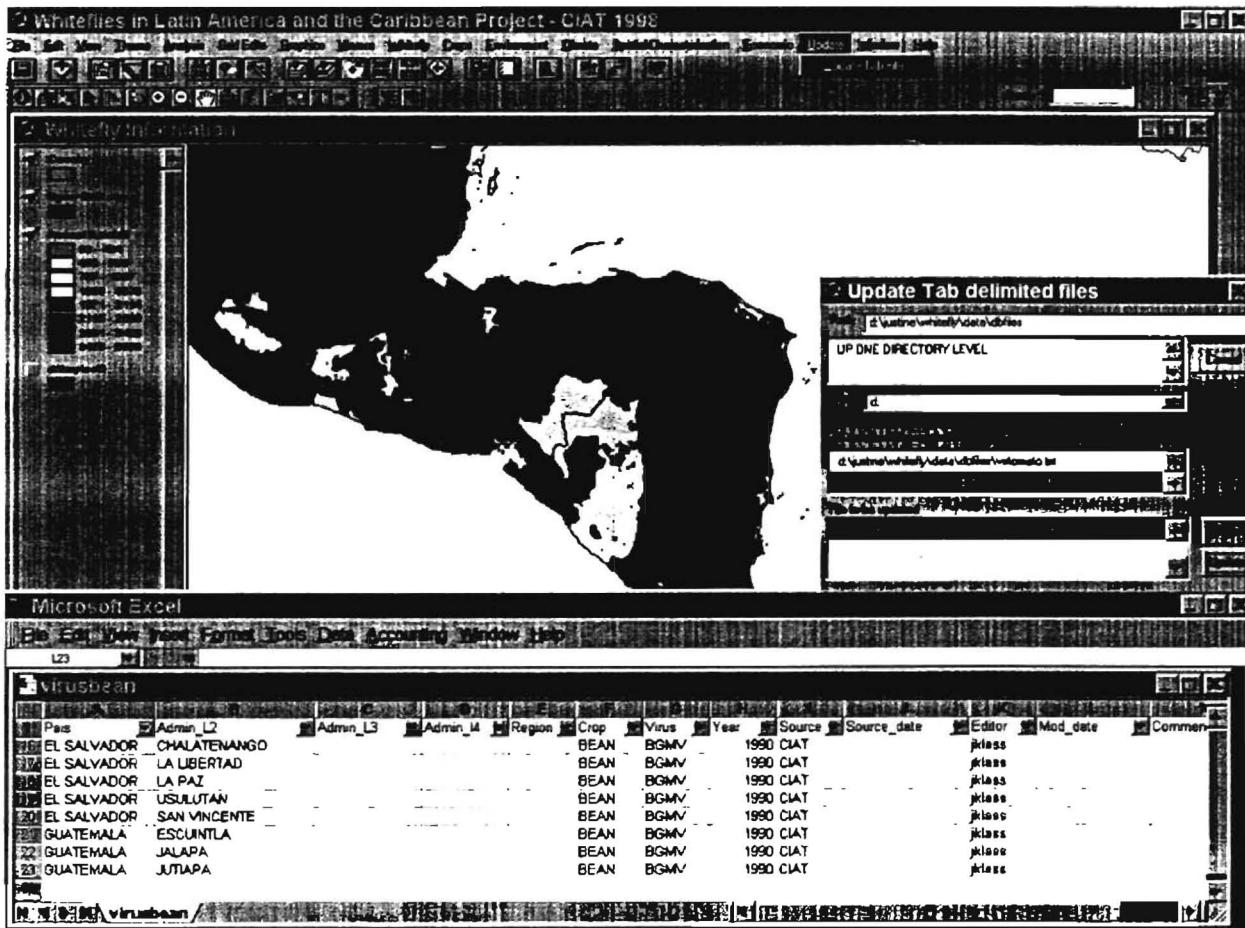

- UPDATE**

*Update Tab Delimited Text File Information*

The user can update a tab delimited text file in Excel and create a new coverage based upon the updated information. This can only be done for information at the following administrative boundary levels: country, administrative level 2 and administrative level 3.

**NOTE:** When adding country or administrative level 2 information ensure it is in capital letters or else the link will not be made between the coverage and the file.

- **Known Problems**

During development the network extension was included and when this is switched off problems occur, therefore it is necessary to include the network extension.

- **Requirements**

**Version of ArcView:** ArcView 3.0a

Due to the links with Microsoft office, this project can only work on an environment that has access to microsoft office.

**Extensions Required:**

Spatial Analysis  
Network Analysis  
Database Themes  
Dialog Designer

- Appendix

This includes the data source information.

- Technical Notes

- I Running the project

Copy the ArcView project onto your computer and edit the **aaastart** script. It is edit the following information to point to where the data is located on the your computer ( ie drive e \ or d \ )

It is necessary to change the paths to access the location of the data on the users system. The **aaastart** script needs to be edited. The items that are in bold need to be altered

- II Programmer's Notes

**Scripts** The scripts are documented
