## Introduction

Regarding genetic resources of forage plants, Southeast Asia is generally considered to be a minor, but important, center of origin and diversity of tropical forage legumes. For example, in his comprehensive overview of tropical legumes with forage potential, Williams (1983) listed 68 genera in the Papilionoideae subfamily alone whose natural distribution extends to tropical Asia. Moreover, from these come a number of species with well-known commercial varieties, such as *Desmodium heterocarpon*, *D. heterophyllum*, *D. ovalifolium* and *Pueraria phaseoloides*. In terms of grasses, the potential of the region as a source of forage germplasm is low.

In spite of the potential of native legumes, systematic plant exploration and collection in the region have only been undertaken recently. They are principally the result of collaborative efforts between national agricultural research institutions and the Centro Internacional de Agricultura Tropical (CIAT), as part of the strategy of CIAT's Tropical Pastures Program to build up a comprehensive international germplasm collection for development of acid-soil tolerant cultivars (Schultze-Kraft, 1985). The objectives of the collection efforts in Southeast Asia are to increase the variability in the previously mentioned legume species where the genetic base of collections has been dangerously narrow, and to make available for evaluation purposes a broad range of other, agronomically unknown genera and species.

Altogether, between 1979 and 1988 nine major collection missions have been carried out, with CIAT's direct involvement, in China, Indonesia, Malaysia, and Thailand. A summarizing report was recently published (Schultze-Kraft et al., 1989). Individual reports with important details such as collection routes taken, are available for the trips in Malaysia and Thailand (Pattanavibul and Schultze-Kraft, 1985; Schultze-Kraft and Pattanavibul, 1990), China (Schultze-Kraft et al., 1984), and Indonesia (Schultze-Kraft et al., 1987). Most missions were supported financially by the International Board for Plant Genetic Resources (IBPGR). An additional trip took place in 1983 and consisted of a CIAT-funded collection in Papua New Guinea organized by the Commonwealth Scientific and Industrial Research Organisation (CSIRO), Australia, in cooperation with the Papua New Guinea Department of Primary Industries. The results of the latter mission were published in the Australian Plant Introduction Review (Anon., 1985).

In addition to the germplasm collected during the previously mentioned joint missions, CIAT has introduced, as donations from other institutions, significant portions of two Indonesian forage legume collections: the IBPGR collection assembled by Mehra (1985), and the CSIRO/Balai Penelitian Ternak (BPT) collection assembled by Reid and Ivory (1983), and Ivory and Yuhaeni (1984).

The objective of this catalog is to document all SE Asian forage germplasm accessions available in the CIAT collection (excluding lost introductions), and to provide some collection site description. More collection site data are available on request. This information is useful for biogeographical studies of the species involved, to design future collection strategies, to assist interpretation of differential adaptations in agronomic evaluation trials, and for other purposes. Emphasis is on germplasm from joint collection missions, i.e., accessions for which original information is available.

This catalog is divided into two principal sections (Sections 1 and 2) and two auxiliary sections (Sections 3 and 4). In Section 1, the accessions from joint collection missions are presented, together with relevant passport information and collection site data which, for a given accession, are to be read across two pages. Section 2 refers to the accessions introduced from other collections as donations and includes only some basic passport information (which is to be read over one page only). For Section 2, any additional information should be requested from the donor institutions holding the original collection data. The main difference between the two principal sections consists in the originality of the accessions, and the originality and extent of available collection site information.

The two auxiliary sections consist of lists of all CIAT accession numbers of SE Asian germplasm, ordered by country of origin, and by genus name (Sections 3 and 4, respectively). These sections are meant to facilitate finding accession numbers of any particular genus and/or from any particular country. All relevant information can then be found in the numerically ordered Section 1 -- if

the respective accession was a joint collection -- or Section 2 (if it was a donation).

At the species level, many taxonomic identifications are still tentative and require revision by the relevant specialists. This is presently being done for a large series of accessions. Lists of updated identifications will be available on request.

The collection is maintained by CIAT's Genetic Resources Unit (GRU) under appropriate cold-storage conditions. A major portion of accessions, mainly of those from joint collection trips, have gone through an initial phase of seed multiplication by the Tropical Pastures Program and/or GRU. Consequently, for many accessions small seed samples (10-30 seeds) can be supplied to bona fide researchers interested in any particular material. Depending on seed availability, priority will be given to researchers of local institutions that cooperated with the collection missions.

For major information, please contact the GRU at CIAT, Apartado Aéreo 6713, Cali, Colombia.

**Acknowledgments.** The collaboration of Belisario Hincapié who organized the data for this catalog, and of Ing. Ind. Arturo Franco, responsible for the CIAT Tropical Pastures Program's data base, is gratefully acknowledged.

Tropical Pastures Program, CIAT

## Introducción

El sureste asiático es considerado como un centro menor -- pero importante -- de origen y de diversificación de leguminosas forrajeras tropicales. Williams (1983), en su amplia sinopsis de leguminosas tropicales con potencial forrajero, enumeró 68 géneros sólo para la subfamilia Papilionoideae, cuya distribución natural se extiende a Asia tropical. A esos géneros pertenecen algunas especies con variedades comerciales bien conocidas, tales como *Desmodium heterocarpon*, *D. heterophyllum*, *D. ovalifolium*, y *Pueraria phaseoloides*. Con respecto a gramíneas, el potencial de esta región como fuente de germoplasma forrajero es bajo.

A pesar del potencial de las leguminosas nativas, fue sólo recientemente que se realizaron actividades de exploración y recolección sistemáticas en la región. Esas actividades son principalmente el resultado de esfuerzos colaborativos de instituciones nacionales de investigación y del Centro Internacional de Agricultura Tropical (CIAT), como parte de la estrategia del Programa de Pastos Tropicales del CIAT de ensamblar una amplia colección internacional de germoplasma con el fin de desarrollar cultivares tolerantes a suelos ácidos (Schultze-Kraft, 1985). Los objetivos de esta recolección en el sureste asiático son: (1) incrementar la variabilidad en las especies antes mencionadas, cuyas bases genéticas en las colecciones de germoplasma eran peligrosamente estrechas, y (2) disponer, con fines de evaluación, de una amplia gama de otros géneros y especies de leguminosas, con características agronómicas hasta ahora desconocidas.

Entre 1979 y 1988 se realizaron nueve misiones de recolección en China, Indonesia, Malasia, y Tailandia; Schultze-Kraft et al. (1989) presentaron recientemente un informe resumido. Informes individuales con detalles importantes tales como rutas de recolección, existen para los viajes en Malasia y Tailandia (Pattanaibul y Schultze-Kraft, 1985; Schultze-Kraft y Pattanaibul, 1990), China (Schultze-Kraft et al., 1984), e Indonesia (Schultze-Kraft et al., 1987). Estas misiones fueron financiadas, en parte, por el International Board for Plant Genetic Resources (IBPGR). Además se realizó en 1983 una misión de recolección en Papua Nueva Guinea financiada por el CIAT y organizada por la Commonwealth Scientific and Industrial Research Organisation (CSIRO), Australia, en cooperación con el Department of Primary Industries de Papua Nueva Guinea. Los resultados de ese viaje se publicaron en el Australian Plant Introduction Review (Anon., 1985).

Además del germoplasma recolectado durante las misiones conjuntas antes mencionadas, el CIAT introdujo, como donación, porciones significativas de dos colecciones de leguminosas forrajeras de Indonesia: La colección del IBPGR ensamblada por Mehra (1985), y la colección de CSIRO/Balai Penelitian Ternak (BPT) ensamblada por Reid e Ivory (1983), e Ivory y Yuhaeni (1984).

Este catálogo tiene como objetivos: (1) informar sobre las accesiones de germoplasma forrajero de Asia suroriental disponibles en la colección del CIAT, excluyendo introducciones perdidas, y (2) presentar lo

más relevante de la información descriptiva de los sitios de recolección. Más información sobre los sitios de recolección está disponible en la base de datos del CIAT. Esta información es útil para estudios biogeográficos de las especies, para desarrollar estrategias de recolección futura, para ayudar en la interpretación de adaptación diferencial en ensayos de evaluación agronómica, y otros fines. El énfasis está en germoplasma procedente de misiones de recolección conjuntas, o sea en accesiones para las cuales el CIAT dispone de información original.

El presente catálogo se divide en dos secciones principales (secciones 1 y 2) y dos secciones auxiliares (secciones 3 y 4). La sección 1 presenta las accesiones provenientes de viajes conjuntos de recolección, e incluye información relevante de pasaporte y de descripción del sitio de recolección. Para una accesión determinada, esta información debe leerse a través de dos páginas. La sección 2 se refiere a las accesiones introducidas como donaciones de otras instituciones, e incluye sólo algunos datos básicos de pasaporte (que deben leerse a través de las columnas de sólo una página). Cualquier información adicional sobre accesiones de esta sección 2 se debe solicitar a la institución donante. La diferencia principal entre las dos secciones consiste en la autenticidad de las accesiones, y en la originalidad y cantidad de la información disponible sobre los sitios de recolección.

Las secciones auxiliares consisten en listados en los cuales se enumeran todas las accesiones del sureste asiático en la colección del CIAT, ordenadas por país (sección 3) y por género (sección 4). El objetivo de estas secciones es facilitar la búsqueda de números de accesiones que por su país de origen y/o por el género al

cual pertenecen, pueden ser de interés para los usuarios de este catálogo. Cualquier información sobre las accesiones de interés se podrá buscar fácilmente en la sección 1 -- si la respectiva accesión provenía de una misión de recolección conjunta -- o sección 2 (si fué una donación).

Actualmente la identificación taxonómica de un gran número de accesiones está siendo revisada por los respectivos especialistas. Por lo tanto, a nivel de especie muchas clasificaciones taxonómicas son tentativas. Listas de identificaciones actualizadas estarán disponibles en breve.

La colección se conserva en la Unidad de Recursos Genéticos (URG) del CIAT bajo condiciones apropiadas en cuarto frío. Una gran parte de las accesiones, especialmente las provenientes de recolecciones conjuntas, han pasado por una fase de multiplicación inicial de semillas por parte del Programa de Pastos Tropicales y/o la URG. En consecuencia, se podrán suministrar cantidades pequeñas de semillas (10-30 semillas) a investigadores interesados en accesiones particulares. Dependiendo de la disponibilidad, se dará prioridad a investigadores de aquellas instituciones que colaboraron en los viajes de recolección.

Para mayor información favor dirigirse a la URG del CIAT, Apartado Aéreo 6713, Cali, Colombia.

**Agradecimientos.** Se agradece la colaboración de Belisario Hincapié, quien organizó los datos para este catálogo, y del Ing. Ind. Arturo Franco, responsable de la base de datos del Programa de Pastos Tropicales.

## Section 1: Germplasm from joint collection missions

This section includes all SE Asian accessions in the CIAT collection that were collected during joint missions, i.e., trips with the participation of CIAT and local institutions. Accessions are presented in a numerical order, irrespective of genus and country of origin. The corresponding passport and collection site information of a given accession extends over two pages, according to the following columns (for translation of column headings see Appendix 1, page 310):

|                                 |                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUMERO CIAT                     | Accession (= entry) number in the CIAT collection.                                                                                                                                                                                                                                                                                     |
| GENERO/ESPECIE                  | The respective scientific names.                                                                                                                                                                                                                                                                                                       |
| FUENTE                          | Reads "CONJ." for all accessions in this Section 1, thus indicating that they were collected during joint collection missions. (Accessions received as donations from other institutions, and those collected by CIAT alone without involvement of a collaborating institution, read "DONA." and "CIAT", respectively; see Section 2.) |
| INSTITUCION(ES) COLABORADORA(S) | Names of institution(s) that cooperated with the respective collection mission (for acronyms see Appendix 2, page 311).                                                                                                                                                                                                                |
| COLECTOR(ES)                    | Names of members of the respective collection teams.                                                                                                                                                                                                                                                                                   |
| OTRO NO. ORIG.                  | Non-CIAT accession number(s) assigned by the respective cooperating institution(s).                                                                                                                                                                                                                                                    |

|                      |                                                                                                                                                                                                             |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OTROS REGISTROS      | Any other entry number(s) the respective accession might have in other major collections of tropical forage germplasm.                                                                                      |
| OBSERVACIONES        | Any relevant observations.                                                                                                                                                                                  |
| ORIGEN               | Name of country (for country abbreviations see Appendix 3, page 312).                                                                                                                                       |
| SUBORIGEN            | Name of province/department/state.                                                                                                                                                                          |
| LUGAR DE RECOLECCION | (= "Collection site"), with details as follows:                                                                                                                                                             |
| KM                   | Distance in kilometers.                                                                                                                                                                                     |
| DIR.                 | Direction North (N), South (S), East (E), West (O).                                                                                                                                                         |
| LUGAR DE REFERENCIA  | Location (generally a town or village) to which the previously indicated distance of the collection site refers.                                                                                            |
| LAT., LONG.          | Coordinates, in degrees and minutes.                                                                                                                                                                        |
| ALT.                 | Altitude, in meters above sea level.                                                                                                                                                                        |
| PREC. ANUAL          | Mean rainfall/year, in mm.                                                                                                                                                                                  |
| MESES SECOS          | Number of months/year with < 60 mm rainfall.                                                                                                                                                                |
| ECOSISTEMA/HABITAT   | General ecosystem or original vegetation in the area, and brief description of the habitat in which the respective accession was collected (for translations of descriptors see Appendix 4, pages 313-315). |

|                      |                                                                                                              |
|----------------------|--------------------------------------------------------------------------------------------------------------|
| INFORMACION<br>SUELO | Soil information relative to collection site<br>(for translations see Appendix 4, page 315).                 |
| F.COL./<br>F.REG.    | Collection date in the first line, and date of<br>registration in the CIAT collection in the<br>second line. |

## Sección 1: Germoplasma de viajes conjuntos de recolección

En esta sección se incluyen las accesiones de Asia  
suroriental, disponibles en la colección del CIAT, las  
cuales se recolectaron durante las misiones conjuntas de  
por lo menos una institución local y el CIAT. Las  
accesiones se presentan en orden numérico,  
independiente del país de origen y/o nombre de género.  
Los datos de pasaporte y la información sobre los sitios  
de recolección se extienden para una accesión dada a  
través de dos páginas de acuerdo con las columnas  
siguientes:

|                                    |                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUMERO<br>CIAT                     | Número de la accesión (entrada) en la<br>colección del CIAT.                                                                                                                                                                                                                                                                                 |
| GENERO/<br>ESPECIE                 | Los respectivos nombres científicos.                                                                                                                                                                                                                                                                                                         |
| FUENTE                             | Dice "CONJ." para todas las accesiones en<br>esta sección 1, indicando que se trata de<br>material de un viaje conjunto de recolección.<br>(Accesiones recibidas de otras instituciones<br>como donaciones, y aquellas recolectadas<br>por el CIAT únicamente, aparecen<br>señaladas "DONA." y "CIAT",<br>respectivamente; véase sección 2.) |
| INSTITUCION(ES)<br>COLABORADORA(S) | Nombre(s) de la(s) institución(es) que<br>colaboraron en el respectivo viaje de                                                                                                                                                                                                                                                              |

|                         |                                                                                                                                                 |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| COLECTOR(ES)            | Nombres de las personas que recolectaron el<br>material.                                                                                        |
| OTRO NO. ORIG.          | Número de entrada, aparte del No. CIAT,<br>que la accesión haya recibido en la<br>institución colaboradora.                                     |
| OTROS<br>REGISTROS      | Cualquier otro número de entrada, con el<br>cual el material se identifica en otra<br>colección mayor de germoplasma de<br>forrajes tropicales. |
| OBSERVACIONES           | Cualquier dato adicional de importancia.                                                                                                        |
| ORIGEN                  | Nombre del país donde se recolectó el<br>material (para las abreviaturas ver<br>Apéndice 3, página 312).                                        |
| SUBORIGEN               | Nombre de la respectiva<br>provincia/departamento/estado.                                                                                       |
| LUGAR DE<br>RECOLECCION | Incluye los detalles siguientes:                                                                                                                |
| KM                      | Distancia en kilómetros.                                                                                                                        |
| DIR.                    | Dirección norte, sur, este, oeste (N,S,E,O).                                                                                                    |
| LUGAR DE<br>REFERENCIA  | Lugar (generalmente una ciudad o<br>población) al cual se refiere la distancia del<br>lugar de recolección.                                     |
| LAT., LONG.             | Coordenadas, en grados y minutos.                                                                                                               |
| ALT.                    | Altitud en metros sobre el nivel del mar.                                                                                                       |
| PREC.<br>ANUAL          | Precipitación promedio anual, en mm.                                                                                                            |
| MESES<br>SECOS          | No. de meses/año con precipitación inferior<br>a 60 mm.                                                                                         |

|                        |                                                                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ECOSISTEMA/<br>HABITAT | Ecosistema general o vegetación original en la zona, y breve descripción del hábitat en el cual se hizo la recolección (para las abreviaturas ver Apéndice 5, pág. 316). |
| INFORMACION<br>SUELO   | Se refiere al suelo en el sitio mismo de recolección (para las abreviaturas ver Apéndice 5, pág. 316).                                                                   |
| F.COL./<br>F.REG.      | Fecha de recolección en la primera línea; fecha de registro en la colección del CIAT en la segunda línea.                                                                |

## Section 2: Germplasm received as donations from other institutions

This section includes all accessions in the CIAT collection that were received as donations from other institutions ("DONA." in the "FUENTE" column). In addition, a few opportunistic collections made by CIAT personnel without the involvement of any cooperating institution are also included in this section ("CIAT" in the "FUENTE" column).

Accessions are presented in a numerical order, irrespective of genus and country of origin. The accession information is limited to one page and includes the columns: "NUMERO CIAT", "GENERO/ESPECIE", "FUENTE", "INSTITUCION DONANTE", "ORIGEN", "SUBORIGEN", "NUMERO DONANTE", "OTROS REGISTROS", "OBSERVACIONES", and "F.COL./F.REG.". For details on the accessions in this section, please contact the respective donor institutions.

## Sección 2: Germoplasma recibido como donación de otras instituciones

En esta sección se incluyen las accesiones de Asia suroriental, disponibles en la colección del CIAT, e introducidas como donaciones de otras instituciones ("DONA." en la columna "FUENTE"). Además se incluyen algunas accesiones recolectadas en forma oportunística por personal del CIAT sin la colaboración de instituciones locales ("CIAT" en la columna "FUENTE"). Las accesiones se ordenan numéricamente, independiente del país de origen y/o nombre de género. La información que se presenta está limitada a las columnas de una página, incluyendo "NUMERO CIAT", "GENERO/ESPECIE", "FUENTE", "INSTITUCION DONANTE", "ORIGEN", "SUBORIGEN", "NUMERO DONANTE", "OTROS REGISTROS", "OBSERVACIONES", y "F.COL./F.REG.". Para más información sobre las accesiones, favor contactar las respectivas instituciones donantes.

### **Section 3: Lists of accessions by country of origin**

In this section, the CIAT accession numbers of Southeast Asian germplasm are ordered by country of origin, irrespective of source and genus. There are six lists which are alphabetically ordered according to the country names China, Indonesia, Malaysia, Papua New Guinea, Philippines, and Thailand. The lists consist of numerically ordered accession numbers, for which detail information can then be found in Section 1 (for joint collections) or Section 2 (donations and CIAT collections).

### **Sección 3: Listados de accesiones según el país de origen**

En esta sección se enumeran las accesiones de germoplasma de Asia suroriental, según su país de origen e independiente de la fuente y/o nombre de género. En total se presentan seis listas ordenadas alfabéticamente, i.e., para China, Indonesia, Malasia, Papua Nueva Guinea, Filipinas y Tailandia. Los listados se componen de números de accesiones ordenados en forma numérica. Cualquier información disponible se podrá buscar fácilmente en la sección 1 (para recolecciones conjuntas) o en la sección 2 (para donaciones y recolecciones CIAT).

## **Section 4: Lists of accessions by genus name**

In this section, the CIAT accession numbers of Southeast Asian germplasm are ordered by genus names, irrespective of source and country of origin. There are 65 lists which are alphabetically ordered according to genus name. The lists consist of numerically ordered accession numbers, for which detail information can then be found in Section 1 (for joint collections) or Section 2 (donations and CIAT collections). Since there are taxonomic uncertainties even at the genus level, the two final lists in this section include a few undetermined grass and legume accessions (page 308).

## **Sección 4: Listados de accesiones según el nombre del género**

En esta sección se enumeran las accesiones de germoplasma de Asia suroriental, según el nombre del género e independiente de fuente y/o país de origen. En total se presentan 65 listas con los nombres de los géneros ordenados en forma alfabética. Las listas se componen de números de accesiones ordenados en forma numérica. Cualquier información disponible se podrá buscar fácilmente en la sección 1 (para recolecciones conjuntas) o en la sección 2 (para donaciones y recolecciones CIAT). Debido a problemas de identificación taxonómica, hasta a nivel de género, las dos listas finales de esta sección comprenden algunas accesiones de gramíneas y leguminosas no identificadas (página 308).

## Appendix 3: Country abbreviations/ Abreviaturas de países

The country abbreviations used are those recommended by the International Board for Plant Genetic Resources (IBPGR)./ Las abreviaturas de los países son las recomendadas por el International Board for Plant Genetic Resources (IBPGR):

|     |                            |
|-----|----------------------------|
| AUS | Australia                  |
| BEL | Belgium                    |
| CPR | People's Republic of China |
| IDN | Indonesia                  |
| MYS | Malaysia                   |
| PHL | Philippines                |
| PNG | Papua New Guinea           |
| THA | Thailand                   |
| USA | United States of America   |

## Appendix 4: Translation of "Ecosistema/Habitat" and "Información suelo" descriptors

### Ecosystem/Original vegetation

|            |                     |
|------------|---------------------|
| B., BOSQUE | forest              |
| B. HUM.    | rainforest          |
| B. SECO    | dry forest          |
| SAB. ARB.  | savanna with shrubs |

### Habitat at collection site

|                             |                             |
|-----------------------------|-----------------------------|
| BORDE ARROZ                 | paddy field edge            |
| BORDE CAMINO                | roadside (small road, path) |
| BORDE CAMINO<br>(TERRAPLEN) | roadside embankment         |
| BORDE GUADUAL               | bamboo-forest edge          |
| CULTIVO<br>COBERTURA        | cover crop                  |
| EN BOSQUE                   | inside a forest             |
| EN BOSQUE DE<br>TECA        | inside a teak forest        |
| EN PARQUE                   | in a park                   |
| EN PAST. NATIVA             | in a native pasture         |
| EN PAST.<br>SEMBRADA        | in a sown pasture           |

|                             |                                                                  |
|-----------------------------|------------------------------------------------------------------|
| EN PAST.<br>SOBREPASTOREADA | in an overgrazed pasture                                         |
| EN PASTURA                  | in a pasture                                                     |
| EN PLANT. CAUCHO<br>NUEVA   | in a young rubber plantation                                     |
| EN PLANTACION<br>CAFE       | in a coffee plantation                                           |
| EN PLANTACION<br>CAUCHO     | in a rubber plantation                                           |
| EN PLANTACION<br>COCOS      | in a coconut plantation                                          |
| EN SABANA                   | in savanna                                                       |
| JARDIN                      | garden                                                           |
| JARDIN HOTEL                | hotel garden                                                     |
| JARDIN VIEJO                | old garden                                                       |
| MAT. ARROZ/<br>CAUCHO       | shrub vegetation at interface paddy field/<br>rubber plantation  |
| MAT. ARROZ/<br>COCOS        | shrub vegetation at interface paddy field/<br>coconut plantation |
| MAT. ARROZ/<br>QUEBRADA     | shrub vegetation at interface paddy field/<br>creek bank         |
| MAT. BARBECHO               | fallow shrub vegetation                                          |

|                       |                                                           |                        |                                                              |
|-----------------------|-----------------------------------------------------------|------------------------|--------------------------------------------------------------|
| MAT. BORDE ACEQUIA    | shrub vegetation along irrigation channel                 | MAT. CAMINO/LAGO       | shrub vegetation at interface roadside/lake shore            |
| MAT. BORDE ARROZ      | shrub vegetation at edge of paddy field                   | MAT. CARRETERA/CAUCHO  | shrub vegetation at interface roadside/rubber plantation     |
| MAT. BORDE B. GALERIA | shrub vegetation at edge of gallery forest                | MAT. CARRETERA/FRUTAL  | shrub vegetation at interface roadside/fruit-tree plantation |
| MAT. BORDE BOSQUE     | shrub vegetation at forest edge                           | MAT. CARRETERA/PAST.   | shrub vegetation at interface roadside/pasture               |
| MAT. BORDE CAFE       | shrub vegetation at edge of coffee plantation             | MAT. CASHEW, EUCAL.    | shrub vegetation in cashew and eucalypt plantation           |
| MAT. BORDE CAÑA       | shrub vegetation at edge of sugarcane field               | MAT. CAUCHO/COCOS      | shrub vegetation at interface rubber/coconut plantations     |
| MAT. BORDE CAMINO     | shrub vegetation at roadside (small road, path)           | MAT. CAUCHO/PIÑA       | shrub vegetation at interface rubber/pineapple plantations   |
| MAT. BORDE CARRETERA  | shrub vegetation at roadside                              | MAT. CEMENTERIO        | shrub vegetation at cemetery                                 |
| MAT. BORDE CAUCHO     | shrub vegetation at edge of rubber plantation             | MAT. FERROCARRIL       | shrub vegetation along railroad                              |
| MAT. BORDE CULTIVO    | shrub vegetation at edge of crop field                    | MAT. FINCA             | shrub vegetation on a farm                                   |
| MAT. BORDE FRUTAL     | shrub vegetation at edge of fruit-tree plantation         | MAT. FRUTALES          | shrub vegetation in a fruit-tree plantation                  |
| MAT. BORDE LAGO       | shrub vegetation at lake shore                            | MAT. GALERIA           | gallery-shrub vegetation                                     |
| MAT. BORDE PIÑA       | shrub vegetation at edge of pineapple field               | MAT. LOTE URBANO       | shrub vegetation on urban wasteland                          |
| MAT. BORDE SORGO      | shrub vegetation at edge of sorghum field                 | MAT. PAST. NATIVA      | shrub vegetation in native pasture                           |
| MAT. BORDE YUCA       | shrub vegetation at edge of cassava field                 | MAT. PLANT. CAUCHO     | shrub vegetation in rubber plantation                        |
| MAT. BOSQUE DE TECA   | shrub vegetation in teak forest                           | MAT. PLANT. COCOS      | shrub vegetation in coconut plantation                       |
| MAT. CAMINO/COCOS     | shrub vegetation at interface roadside/coconut plantation | MAT. PLANT. MANGO      | shrub vegetation in mango plantation                         |
|                       |                                                           | MAT. PLANT. PALMA AFR. | shrub vegetation in oil-palm plantation                      |

| MAT. PLANTACION          | shrub vegetation in unspecified tree<br>plantation                   |
| MAT. QUEBRADA            | shrub vegetation on bank of a creek                                  |
| MAT. QUEDRADA<br>SECA    | shrub vegetation on bank of a dry creek                              |
| MAT. QUEBRADA/<br>CAUCHO | shrub vegetation at interface creek/rubber<br>plantation             |
| MAT. QUEBRADA/<br>YUCA   | shrub vegetation at interface creek/cassava<br>field                 |
| MAT. RIO                 | shrub vegetation on river bank                                       |
| MAT. RIO/ARROZ           | shrub vegetation at interface river bank/<br>paddy field             |
| MAT. SECO                | dryland shrub vegetation                                             |
| MAT.<br>SOBREPASTOREADO  | overgrazed shrub vegetation                                          |
| MAT. VEGETACION<br>PLAYA | sea-shore shrub vegetation                                           |
| MATORRAL                 | shrub vegetation                                                     |
| RASTROJO ARROZ           | paddy-field stubble                                                  |
| TERRENO DISTURB.         | vegetation and soil disturbed                                        |
| VEGETACION<br>PLAYA      | sea-shore vegetation                                                 |
| Soil information         |                                                                      |
| ALUVIAL                  | alluvial                                                             |
| ANAL.                    | analysis (means that additional soil analysis<br>data are available) |
| FERTIL                   | fertile                                                              |

|                          |                  |
|--------------------------|------------------|
| FERT. BAJA               | low fertility    |
| FERT. MEDIA, F.<br>MEDIA | medium fertility |
| GRAVA LATER.             | lateritic gravel |
| LATERITICO               | lateritic        |

## Apéndice 5: Abreviaturas de descriptores en "Ecosistema/Habitat" e "Información suelo"

|                  |                                                                            |
|------------------|----------------------------------------------------------------------------|
| ANAL.            | análisis (indica disponibilidad de datos adicionales de análisis de suelo) |
| B.               | bosque (como vegetación original)                                          |
| B. HUM.          | bosque húmedo                                                              |
| EUCAL.           | <i>Eucalyptus</i>                                                          |
| F., FERT.        | fertilidad                                                                 |
| GRAVA LATER.     | grava laterítica                                                           |
| MAT.             | matorral                                                                   |
| PALMA AFR.       | palma africana, palma aceitera ( <i>Elaeis guineensis</i> )                |
| PAST.            | pastura                                                                    |
| PLANT.           | plantación                                                                 |
| SAB. ARB.        | sabana arbustiva                                                           |
| TERRENO DISTURB. | terreno (suelo, vegetación) disturbado                                     |
